1.0 INTRODUCTION

A multi-media consent order (Order No. GWR-2001-019) was entered into between the West Virginia Department of Environmental Protection (WVDEP), the West Virginia Department of Health and Human Resources – Bureau for Public Health (WVDHHR-BPH) and DuPont on November 15,2001 (Consent Order). The Consent Order identified a series of requirements and tasks to be performed by the parties to determine whether there has been an impact on human health and the environment as a result of releases of ammonium perfluorooctanoate (C-8), CAS Number 3825-26-1, to the environment from DuPont operations at the Washington Works facility and the associated landfills (Local, Letart and Dry Run).

The Consent Order established the C-8 Groundwater Investigation Steering Team (GIST) to oversee investigations and activities that will be conducted to assess the presence and extent of C-8 in drinking water, groundwater, and surface water at and around the Washington Works facility and the Local, Letart and Dry Run Landfills.

An additional component of the Consent Order relates to the National Pollutant Discharge Elimination System (NPDES) permit sampling requirements. In this portion of the Consent Order, specific outfalls and outlets (outfalls) are to be sampled monthly for C-8 by DuPont.

Pursuant to Attachment A of the Consent Order, three tasks will be performed by DuPont and evaluated by the GIST, Tasks A, B, and C. Task A: Groundwater Use and Well Survey/Groundwater Monitoring has been completed (DuPont, 2002a; 2002b). Task B: Assessment of Existing Groundwater and Surface Water Monitoring Data includes the compilation of historical C-8 data, monitoring all wells at the landfills and the development of a Groundwater Monitoring Plan *(GMP)* for the Washington Works facility. The first part of the task, the historical C-8 data compilation report has been submitted to the GIST for evaluation (DuPont, 2002c). The second part of this task, monitoring C-8 in groundwater at the landfills, began in December 2001 and was performed monthly for four months and quarterly thereafter. The third part of the task, the proposed GMP for the Washington Works facility, was submitted to the GIST for evaluation (DuPont, 2002d) and groundwater sampling on the Washington Works facility began in January 2002. Groundwater sampling at the Washington Works facility was conducted monthly for four months and continues quarterly. Task C: Plume Identification/Groundwater Assessment is ongoing.

This report presents the results of the monthly (August 2002) C-8 surface water sampling and the 3rd Quarter 2002 (3Q02) C-8 groundwater sampling that was perfonned in August and September 2002. Surface water and groundwater results are presented for the Washington Works facility and the Local, Letart and Dry Run landfills.

2.0 C-8 ANALYTICAL REPORTING

The analytical method, method detection limit, and laboratory utilized for C-8 analysis has changed over time. Prior to 1991, DuPont performed C-8 analysis at the DuPont Experimental Station in Wilmington, Delaware. In 1991, when the RCRA Verification Investigation was conducted, the analysis was contracted to the CH_2MHill Laboratory in Montgomery, Alabama. Both labs used a Gas Chromatography/Electron Capture Detector (GC-ECD) based analytical method with detection limits for C-8 that ranged from 0.1 to 1.0 ug/l.

CH_2MHill conducted C-8 analysis for DuPont into the fall of 1998 when the laboratory ceased operation. At that time, DuPont had completed one round of analysis for the RCRA Facility Investigation (RFI). The analytical work was transferred to Lancaster Laboratories, Lancaster, PA, for the RFI second round analysis in March 1999. Lancaster Laboratories continued to conduct C-8 analysis using GC-ECD for DuPont until October 2001, when development and testing was completed on a new analytical method developed by Exygen Research, Inc. (Exygen; located in State College, PA) that utilizes Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS). DuPont adopted the regular use of LC/MS/MS for C-8 analysis in water in November 2001 and Exygen was contracted to perform the analyses for DuPont.

Exygen reports C-8 results for the laboratory replicate of each field sample. These results are evaluated for precision by comparing the field sample result to the corresponding laboratory replicate result.

- If both results are less than the practical quantitation limit (PQL), the replicate sample for that analyte is considered to have passed the precision criteria.
- If one or both results are between one and five times the PQL, the replicate is considered to have met the precision criteria if the two results differ by less than the PQL.
- If one result is less than the PQL and the other is not, and if the two results differed by a value less than the PQL, the replicate is said to have met the acceptance criteria.
- Finally, if both results are at least five times the PQL, the replicate is considered to have met the criteria if the relative percent difference (RPD) between the two results is less than or equal to **20%.** The RPD is the absolute value of the difference of two measurements divided by their average.

When the precision criteria outlined above are met, Exygen reports the average of the field sample and lab replicate results reported by the laboratory. If criteria for precision are exceeded, Exygen reports the higher of the sample and lab replicate results. Finally, when one result (from the sample/lab replicate pair) is above the PQL and one below, the result that is above the PQLs is reported. C-8 results are recorded in the Corporate Environmental Database (CED) and are reported as FC-143 for consistency with historical results.

3.0 WASHINGTON WORKS FACILITY

Figure 1.0 shows the location of the Washington Works facility. *On* August 27th, 2002, six outfalls were sampled for C-8 (001, 002,003, 005,007, and 105). All of these outfalls collect process water and stormwater runoff. Sampling of these outfalls is required by the Consent Order and WV NPDES permit No. WV0001279. The locations of these outfalls are shown in Figure 1.1.

Groundwater was sampled from seven monitoring wells on September 4th, 2002. Monitoring well P08-MW01 and N13-MWOl were not sampled during this sampling event because the wells were *dry*. No other changes to routine sampling protocols or other observations were recorded in the field notes during this sampling event.

In addition, groundwater from six production wells was sampled on August 13th or 26th, 2002. Sampling for these wells was done according to routine sampling protocols, A combined groundwater sample representative of all the wells in the DuPont-Lubeck Well Field, labeled West Wellfield 1, was also collected, and analyzed for C-8. Sampling this well field was not identified in the Groundwater Monitoring Plan for the facility nor was it recommended by the GIST for C-8 sampling. However, it was being sampled quarterly and analyzed for C-8 as required by the permit. Sampling of this well field on a monthly basis commenced in December 2001 through April 2002, and is now sampled quarterly.

The locations of the monitoring and production wells sampled are shown on Figure 1.1. This figure also shows the position of the DuPont-Lubeck Well Field that was sampled. Table 1.0 summarizes the well screen data and 3Q02 groundwater elevations measured for the monitoring wells. (Note that Table 1.0 has been reorganized to better display the data. This new format will be used in future surface water and groundwater monitoring reports.). A groundwater elevation map for 3Q02 was not generated because of the limited data set. However, the groundwater elevation map generated fiom data collected in February 2002 is provided in Figure 1.2 for reference (DuPont, 2002c).

Tables 1.1A and 1.1B provide the C-8 analytical results for surface water and groundwater, respectively. For each sampling point listed in these tables, historical data is summarized with the most recent results listed first. Figure 1.3 presents the C-8 concentration map for the wells and outfalls sampled for 3Q02. Laboratory analytical data reports and the Chain-of-Custody records *are* included in Appendix A and B respectively.

4.0 LOCAL LANDFILL

Figure 2.0 shows the location of the Local Landfill. On August 26th, 2002, Outfall 101 was sampled for C-8. Outfalls 004(Old), 004(New), and 005(Old)/SS1 005(New) were not sampled due to no-flow conditions. Sampling of these five outfalls is required by the Consent Order and the WV **NPDES** permit No. WV0076538. These five outfalls collect stormwater runoff and process water. The locations of the outfalls are shown on Figure 2.1.

On September 3rd, 2002 four monitoring wells (LLMW-4, -6, **-9,** and –10) were sampled for C-8. All wells were sampled following routine sampling protocols. Figure 2.1 shows the location of the monitoring wells sampled. Table **2.0** summarizes the well construction and groundwater elevation data for the monitoring wells. (Note that Table 2.0 has been reorganized to better display the data. This new format will be used in future surface water and groundwater monitoring reports.). Figure 2.2 presents the groundwater elevation map for September 2002.

Tables 2.1A and 2.1B present the C-8 analytical results for the 3Q02 surface water and groundwater samples, respectively. These tables include the historic data available for each location sampled. The data is presented with the most recent data first. Figure 2.3 provides the **C-8** concentration map for the outfalls and monitoring wells for 3Q02. Laboratory analytical data reports and Chain-of-Custody records are provided in Appendices C and D, respectively. (Note that the sample for Outfall 101 was included on a Chain-of-Custody record with samples collected from Washington Works and therefore, the sample data was included with samples the from Washington Works laboratory analytical data report. **As** a result, the sample's chain-of-custody and data report is included in Appendices **A** and B.)

5.0 LETART LANDFILL

Figure 3.0 presents the Letart Landfill location map. On August 30th, 2002, sampling was conducted at Outfall 002. Outfall 003, Cap Runoff, and the Rt. 33 stream were not sampled due to no-flow conditions. Sampling of Outfalls 002 and 003 (both containing stormwater runoff) is required by the Consent Order and WV NPDES permit No. WV0076066. The Cap Runoff and Rt. 33 stream surface water locations are not required sampling points. The locations of the outfall samples are shown on Figure 3.1. The location of the Rt. 33 stream sample is near the property boundary to the west and is not shown in this figure.

Nine monitoring wells at Letart Landfill were sampled on August 26th through 29th, 2002. Monitoring well construction and groundwater elevation data for the 13 monitoring wells are presented in Table 3.0. (Note that Table 3.0 has been reorganized to better display the data. This new format will be used in future surface water and groundwater monitoring reports.). Figure 3.1 shows the locations of the monitoring wells. Figure 3.2 presents the August 2002 groundwater elevation map for the F-Zone aquifer.

Changes to routine sampling protocols were recorded in the field notes and are summarized below. Monitoring wells LMW-3, LMW-3A, and LMW-5A went dry during low-flow purging and could not be sampled. Monitoring well LMW-10 could not be sampled because the bladder pump failed.

The C-8 results for the 3Q02 surface water and groundwater samples are presented in Tables 3.1A and 3.1B, respectively. For each sampling point listed in these tables, historical data is summarized with the most recent results listed first. Figure 3.3A presents a C-8 concentration map for monitoring wells and outfalls for 3Q02. Figure 3.3B provides a C-8 concentration contour map for the F-zone, the underlying significant aquifer. Appendices E and F present the laboratory analytical data reports and the Chain-of-Custody records, respectively.

6.0 DRY RUN LANDFILL

Figure 4.0 shows the location of the Dry Run Landfill. On August 30th 2002, sampling for C-8 was attempted but Outfalls 001,003, and 004 were not sampled due to no-flow conditions. (Outfall 002 is a required outfall sampling location as stated in WV NPDES permit No. WV0076244. However, it was a temporary relocation of outfall 001 and no longer exists). Outfall 001 collects stormwater and leachate. Outfalls 003 and 004 collect stormwater only. There are five additional non-required sampling locations that are sampled quarterly for C-8. These include Stream Samples #1 and #2, **DR** Leachate, Pond Underdrain, and Property Boundary. Sampling was attempted at Stream Samples #1 and #2, and Property Boundary, however samples were not collected due to no-flow conditions. The DR Leachate and Pond Underdrain locations were inadvertently not sampled. The locations of the surface water sampling points and monitoring wells are shown on Figure 4.1. The Property Boundary sample location is on the western property boundary and is not shown in this figure.

On August 28th, 2002 the eight monitoring wells were sampled. No changes from routine sampling protocols were identified in the field notes. The locations of the monitoring wells can be found on Figure 4.1.

Table 4.0 summarizes the monitoring well construction and groundwater elevation data for the monitoring wells. (Note that Table 4.0 **has** been reorganized to better display the data. This new format will be used in future surface water and groundwater monitoring reports.). Figure 4.2 presents the 3Q02 groundwater elevation map for the bedrock aquifer. Tables 4.1A and 4.1B present the **C-8** analytical results for the 3Q02 surface water samples and groundwater samples, respectively. The data in these tables include historical data available for each location sampled. Figure 4.3 presents the C-8 concentration map for surface water for 3Q02 and Figure 4.4 presents the **C-8** concentrations in bedrock groundwater for 3Q02. Laboratory analytical data reports and Chain-of-Custody records are provided in Appendices G and H, respectively.

ND = Not Detected at or **above the limit of detection (LOD).**
The listed LOD is approximate and varies by instrument and over time.
NQ = Not Quantifiable. Detected at a concentration above the LOD and below the limit of **quantification (LOQ).**
J = estimated value (below laboratory quantitation limit).
Note: Analytical method changed as of **November 2001 (see Section 2.0 for details).**

WWK-Z-Outfall-105	6730
WWK-Z-Outfall-002-2	2510
WWK-Z-EQBLK-1	NQ

Limit of Detection (LOD) for the procedure is appoximately 10 ng/L

Limit of Quantitation (LOQ) for the procedure is 50 ng/L

ND - Compound not detected

NQ - Compound detected at a level between the LOD and **LOQ.** Result is not quantifiable.

ND < LOD < NQ < LOQ

Results are calculated according to the following criteria

If the sample and laboratory duplicate are greater than 250 ng/L, and the relative percent difference (RPD) is less than 20, the average value is reported. If the RPD is greater than 20, the higher value is reported.

If the sample and laboratory duplicate are less tha 250 ng/L, and the absolute difference is less than 50, the average value is reported. If the absolute difference is greater than 50, the higher value is reported.

APPENDIX C

LABORATORY ANALYTICAL DATA REPORTS

LOCAL LANDFILL

Exygen RESEARCH
Precise Research. Proven Results.

Report

Analytical Results Local Landfill C8 Sampling 9/02

DuPont Sample Identification	APFO (ng/L)
LCL-G-MW-4	**63500**
LCL-G-MW-6	**13700**
LCL-G-MW-9	NQ
LCL-G-MW-10	**357**
LCL-K-EQBLK-2	ND

Limit of Detection (LOD) for the procedure is appoximately 10 ng/L

Limit of Quantitation (LOQ) for the procedure is 50 ng/L

ND - Compound not detected

NQ - Compound detected at a level between the LOD and LOQ. Result is not quantifiable.

ND *c* LOD *c* NQ < LOQ

Results are calculated according to the following criteria

If the sample and laboratory duplicate are greater than 250 ng/L, and the relative percent difference (RPD) is less than 20, the average value is reported. If the RPD is greater than 20, the higher value *is* reported.

If the sample and laboratory duplicate are less tha **250** ng/L, and the absolute difference *is* **less** than 50, the average value **is** reported. If the absolute difference is greater than 50, the higher value is reported.

LABORATORY ANALYTICAL DATA REPORTS

DRY RUN LANDFILL

Exygen RESEARCH
Precise Research. Proven Results.

Analytical Report

Analytical Results Dry Run Landfill C8 Sampling 8/02

DuPont Sample Identification	APFO (ng/L)
DRL-G-DRMW6A	785
DRL-G-DRMW12	62.6
DRL-G-DRMW12A	88.0
DRL-G-DRMW12B	NQ
DRL-G-DRMW13	13100
DRL-G-DRMW13A	5140
DRL-G-DRMW14	NQ
DRL-G-DRMW15	3990
DRL-G-DRMW13-2	14600
DRL-K-EQBLK-3	ND

Limit of Detection (LOD) for the procedure is appoximately 10 ng/L

Limit of Quantitation (LOQ) for the procedure is 50 ng/L

ND - Compound not detected

NQ - Compound detected at a level between the LOD and LOQ. Result is not quantifiable.

ND < LOD < NQ < LOQ

Results are calculated according to the following criteria

If the sample and laboratory duplicate are greater than 250 ng/L, and the relative percent difference (RPD) is less than 20, the average value is reported. If the RPD is greater than 20, the higher value is reported.

If the sample and laboratory duplicate are less tha 250 ng/L, and the absolute difference is less than 50, the average value is reported. If the absolute difference is greater than 50, the higher value is reported.
