

Fluometuron – PC 035503

The tables below contain “screening level” usage data for agricultural crops. This information is retrieved from our principal agricultural pesticide usage databases. At the present time data from 1998 to 2002 is being used.

All numbers reported are rounded.

'<500' indicates less than 500 pounds of active ingredient.

'<2.5' indicates less than 2.5 percent of crop is treated.

Maximum percent of crop treated is the highest **observed** percent crop treated during this time period. For some crops there may have been only one or two observations and it is quite possible that if usage information had been available for more years that higher usage might have been observed. This situation is more likely to occur with low acreage crops.

'(CA only)' indicates information was available only for California. California requires reporting of all agricultural pesticide use. Their database may indicate small amounts of usage of a pesticide on crops on which the pesticide is not registered. Possible reasons for this include:

- This use may actually have occurred either as an unregistered use or as an experimental or other use in which the crop was not intended for consumption.
- Data input errors may have occurred and either the crop or the pesticide is incorrect in the database.

Use of the chemical on crops for which only California use is reported may possibly have occurred in other states.

In some cases the percent crop treated column is blank. This is because information on acres grown was not readily available.

Some of the numbers may be based on information that does not cover all 50 states. Therefore, it is possible that if the remaining (usually minor states for the crop) had been included that pounds of active ingredient would be slightly higher.

Screening Level Estimates of Agricultural Uses of Fluometuron
Sorted Alphabetically

OBS	Crop	Pounds of Active Ingredient	Percent of Crop Treated	
			Avg	Max
1	Cotton	2,400,000	20	35

All numbers rounded.

'<500' indicates less than 500 pounds of active ingredient.

'<2.5' indicates less than 2.5 percent of crop is treated.

'(CA only)' indicates information was available only for California.

Use of Fluometuron on this crop may also have occurred in other states.
