Subject: Draft incineration ECA documents 1 of 2 e-mails

This e-mail transmits DRAFT documents for the PFOA incineration ECA activities that will be discussed during the January 27-29 PFOA meetings. Attached are separate files for the fluoropolymer and telomer draft ECA documents. A third file contains Appendices that are common to both ECAs. These draft documents are provided to the Interested Parties as FYI. The Incineration Drafting Committees are not looking for detailed comments from you at this time. A formal opportunity for Interested Party comment will be provided on the DRAFT FINAL document when they become available. These drafts are being distributed: 1) to show the significant progress that has been made in developing the appendices and ECA agreement language since the last PFOA Plenary, and 2) for use during progress report discussions at the January PFOA meetings.

These draft documents incorporate changes as discussed during Drafting Committee teleconference held on 1/21/04 and some but not all changes from the 1/22/04 teleconference. The following identifier highlights those few remaining places where the Drafting Committee continues discussions and/or where additional work remains:

[NOTE: Drafting Committee discussions are continuing to finalize this section]

Please be familiar with these materials so you can follow along during the discussions next week.

*DRAFT #7 TO INTERESTED PARTIES - PFOA ECA PROCESS*

**ENFORCEABLE CONSENT AGREEMENT  
FOR  
THE LABORATORY-SCALE INCINERATION  
TESTING OF FLUOROPOLYMERS**

**Docket No. OPPT - 2003 - 0071**

[DRAFT 1/27-29/04]  
[Month Year]

**NOTE TO INTERESTED PARTIES:**

This *DRAFT* document is provided to the Interested Parties as FYI. The Drafting Committee is not looking for detailed comments from you at this time. A formal opportunity for Interested Party comment will be provided on the DRAFT FINAL document when it becomes available. This draft is being distributed: 1) to show the significant progress that has been made in developing the appendices and ECA agreement language since the last PFOA Plenary, and 2) for use during progress report discussions at the January PFOA meetings. This draft incorporates changes as discussed during Drafting Committee teleconferences held on 1/21 and 1/22/04. The following identifier highlights those few remaining places where the Drafting Committee continues discussions and/or where additional work remains:

[NOTE: Drafting Committee discussions are continuing to finalize this section]

1 **I. INTRODUCTION**

2  
3 Under the authority of section 4 of the Toxic Substances Control Act (TSCA), 15 U.S.C.  
4 2603, and 40 CFR Part 790 of the Agency's implementing regulations, the United States  
5 Environmental Protection Agency (EPA) and Asahi Glass Fluoropolymers USA, Inc., Daikin  
6 America, Inc., Dyneon, LLC, and E.I. du Pont de Nemours and Company (hereinafter  
7 collectively "the Companies") enter into this enforceable consent agreement (ECA). This ECA  
8 will take effect on the date of publication of the notice in the Federal Register announcing the  
9 issuance of the testing consent order (Order) that incorporates this ECA.

10  
11 On April 16, 2003, EPA initiated a public process to negotiate enforceable consent  
12 agreements (ECAs) concerning perfluorooctanoic acid (PFOA) and fluorinated telomers to  
13 develop environmental fate and transport information, as well as relevant information to enhance  
14 understanding of the sources of PFOA in the environment and the pathways by which human  
15 exposure to PFOA is occurring (68 FR 18626; April 16, 2003). The goal of the ECAs resulting  
16 from these public discussions is to develop data relevant to identifying the pathway or pathways  
17 that result in exposures to PFOA by air, water, soil, or food; and to characterize how PFOA gets  
18 into those pathways (including the products or processes that are responsible for the presence of  
19 PFOA in the environment). EPA anticipates that the data to be developed under such ECAs will  
20 be beyond or supplemental to that of ongoing testing efforts described under industry letters of  
21 intent (LOIs) (Refs 1-4). [OPPT-2003-0012-0007,0012,0013,0016]

22  
23 In preparation for the June 6, 2003, public meeting, EPA developed a preliminary  
24 framework document outlining data needs that the Agency deemed appropriate to address the  
25 outstanding PFOA source and exposure questions identified in the *Federal Register* notice of  
26 April 16, 2003 (Ref 5)[OPPT-2003-0012-0056]. The intent of EPA's preliminary framework  
27 document was to serve as a discussion guide for the June 6, 2003, public meeting and to aid in  
28 distinguishing between outstanding EPA data needs and industry LOI commitments. The  
29 preliminary framework document was not a predetermined list of information needs defining the  
30 outcome of the ECA process.

31  
32 This ECA provides for a laboratory-scale incineration testing program of fluoropolymers,  
33 which is one of the data needs identified in EPA's preliminary framework document for PFOA.  
34 On June 6, 2003, the PFOA Plenary Group (consisting of EPA and all interested parties)  
35 acknowledged such a testing program as an opportunity for ECA development and tasked the  
36 Fluoropolymer Technical Workgroup to work out the details that could be incorporated into an  
37 ECA between test sponsors and EPA. On July 9, 2003, the Fluoropolymer Technical Workgroup  
38 received proposals from the Companies and EPA for incineration testing of fluoropolymers.  
39 Details of this testing program were developed by members of the Fluoropolymer Incineration  
40 Subgroup of the Fluoropolymer Technical Workgroup during subsequent meetings. On  
41 [Month/Date], 2003, the Fluoropolymer Technical Workgroup acknowledged that this testing

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
FLUOROPOLYMER ECA DRAFTING COMMITTEE**

1 program had sufficient merit for consideration by the Plenary Group. On [Month/Date], 2003,  
2 the Plenary Group discussed the merit of this testing program and recommended that EPA  
3 consider entering into an ECA with test sponsors. The official record for the development of this  
4 ECA, including the public version, is established under EPA docket control number [OPPT-  
5 2003-0012]. The procedures for ECA negotiations are described at 40 CFR 790.22(b). The  
6 official record for the testing conducted under this ECA is Docket No. OPPT-2003-0071  
7  
8

9 **II. TEST SUBSTANCES**

10  
11 For the purposes of testing under this ECA the chemicals listed in Appendix A.1<sup>1</sup> will be  
12 combined to form four composites (see Appendix A.3 and A.4). These four composites are  
13 considered the subject test substances under this ECA. These composites are representative of  
14 fluoropolymer products manufactured by the Companies that are currently available in the  
15 marketplace. The Companies will provide the fluoropolymers specified in Appendix A.1 for  
16 incorporation into the composites that will be tested under this ECA.<sup>2</sup> Criteria for the selection  
17 of each composite to be tested under this ECA are described in Appendix A.2 of this ECA<sup>1</sup>. The  
18 composition of each composite is described in Appendix A.3 of this ECA<sup>1</sup>. The four composites  
19 to be tested are defined for purposes of this ECA as:

- 20  
21 (A) Dry Non-Melt PTFE Resin Composite: Ethene, tetrafluoro-,  
22 homopolymer, CAS No. 9002-84-0,  
23  
24 (B) Dry Melt Fluoropolymer Resin Composite: (containing: 1-  
25 Propene, 1,1,2,3,3,3-hexafluoro-, polymer with tetrafluoroethene),  
26 CAS No. 25067-11-2; Propane, 1,1,1,2,2,3,3-heptafluoro-3-  
27 [(trifluoroethenyl)oxy]-, polymer with tetrafluoroethene, CAS No.  
28 26655-00-5; Ethene, tetrafluoro-, polymer with  
29 trifluoro(pentafluoroethoxy)ethene, CAS No. 31784-04-0; 1-  
30 Propene, 1,1,2,3,3,3-hexafluoro-, polymer with 1,1-difluoroethene  
31 and tetrafluoroethene, CAS No. 25190-89-0; 1-Hexene,  
32 3,3,4,4,5,5,6,6,6-nonafluoro-, polymer with ethene and  
33 tetrafluoroethene, CAS No. 68258-85-5; and, 1-Propene,

---

<sup>1</sup> There is a Public and CBI version of Appendices A.1, and A.3 because some of the Companies have asserted that details describing one or more of the chemicals subject to this ECA are entitled to treatment as TSCA confidential business information (CBI) (see Part XV of this ECA regarding confidentiality of information).

<sup>2</sup> See the Tables in Part XXIV. of this ECA for the chemicals to be supplied by each Company.

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
FLUOROPOLYMER ECA DRAFTING COMMITTEE**

1 1,1,2,3,3,3-hexafluoro-, polymer with ethene and tetrafluoroethene,  
2 CAS No. 35560-16-8),  
3

4 (C) Dry Non-Melt Fluoroelastomer Gum Composite: (containing: 1-  
5 Propene, 1,1,2,3,3,3-hexafluoro-, polymer with 1,1-difluoroethene,  
6 CAS No. 9011-17-0; 1-Propene, 1,1,2,3,3,3-hexafluoro-, polymer  
7 with 1,1-difluoroethene and tetrafluoroethene, CAS No. 25190-89-  
8 0; 1-Propene, polymer with 1,1-difluoroethene and  
9 tetrafluoroethene, CAS No. 54675-89-7; 1-Propene, polymer with  
10 tetrafluoroethene, CAS No. 27029-05-6; Ethene, tetrafluoro-,  
11 polymer with trifluoro(trifluoromethoxy) ethene, CAS No. 26425-  
12 79-6; and, Ethene, chlorotrifluoro-, polymer with 1,1-  
13 difluoroethene, CAS No. 9010-75-7; and ??generic name??,  
14 **Accession No. ??????**, and  
15

16 (D) Aqueous Fluoropolymer Dispersions Composite: (containing:  
17 Ethene, tetrafluoro-, polymer with trifluoro(pentafluoroethoxy)  
18 ethene, CAS No. 31784-04-0; Ethene, tetrafluoro-, homopolymer,  
19 CAS No. 9002-84-0; 1-Propene, 1,1,2,3,3,3-hexafluoro-, polymer  
20 with tetrafluoroethene), CAS No. 25067-11-2; Propane,  
21 1,1,1,2,2,3,3-heptafluoro-3-[(trifluoroethenyl)oxy]-, polymer with  
22 tetrafluoroethene, CAS No. 26655-00-5; Ethene, tetrafluoro-,  
23 polymer with trifluoro(pentafluoroethoxy)ethene, CAS No. 31784-  
24 04-0; and 1-Propene, 1,1,2,3,3,3-hexafluoro-, polymer with 1,1-  
25 difluoroethene and tetrafluoroethene, CAS No. 25190-89-0.  
26

27 The procedure for constructing each composite is described in Appendix A.4 to this  
28 ECA<sup>1</sup>. The polymer components for each composite will be unfilled first quality product  
29 polymer, substantially free of inorganic constituents. Each component of the four composites to  
30 be tested under this ECA will be accompanied by a certificate of analysis showing it to meet  
31 applicable product specifications.  
32

33  
34 **III. OBLIGATION OF SIGNATORY COMPANIES**  
35

36 A. The Companies are bound by the terms of this ECA as specified below.  
37

38 B. Each Company shall be responsible for supplying the test substance(s) it  
39 manufacturers for incorporation into the composite(s) to be tested under this ECA, as specified  
40 on each Company signature page and in Appendix A.3. The schedule for the testing program  
41 includes the deadline date by which the Companies must submit their contribution(s) to the

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004**  
**FLUOROPOLYMER ECA DRAFTING COMMITTEE**

1 facility(ies) that will be assembling the composites to be tested under this ECA. Any Company  
2 failing to comply with this ECA requirement will be in violation of this ECA as described in 40  
3 CFR 790.65 (see Part XII of this ECA). In the event that one or more of the Companies are in  
4 violation as described above then the remaining Companies will inform EPA of the problem and  
5 request an EPA determination on how to proceed with the testing program described under this  
6 ECA. Each Company required to contribute to a particular composite is obligated to complete  
7 the testing required by this ECA for that composite. A Company shall not be responsible for any  
8 failure to perform its obligation under this ECA that is caused by circumstances beyond its  
9 control, that the Company could not have prevented through the exercise of due diligence. Under  
10 such circumstances the Company will consult with EPA to reach agreement on what  
11 modifications, if any, are needed in the test plan or scope of testing (see Part X of this ECA  
12 regarding modification to this ECA as contained in 40 CFR 790.68).

13  
14 C. The Companies recognize that to implement this ECA, EPA will issue an Order under  
15 section 4 of TSCA that incorporates the terms of this ECA (see Appendix F). The Companies  
16 agree that all terms of this ECA will take effect on the date of publication of the notice in the  
17 Federal Register announcing the issuance of the Order that incorporates this ECA, and all time  
18 periods that begin on the effective date, will be treated as beginning on that publication date.

19  
20  
21 **IV. PRINCIPAL TEST SPONSOR**

22  
23 The Companies have identified the Fluoropolymer Manufacturers Group (FMG), to  
24 communicate with EPA about schedules, study plans, protocols, test standards, and other aspects  
25 of the testing program. EPA and the Companies agree that FMG has no legal responsibility for  
26 complying with this ECA. Responsibility for complying with the ECA rests at all times with the  
27 Companies.

28  
29  
30 **V. PURPOSE OF THE TESTING PROGRAM**

31  
32 The purpose of the testing program specified by this ECA is to assess the potential for  
33 waste incineration of fluoropolymers (see Part II and Appendix A.1 of this ECA) to emit PFOA,  
34 based on quantitative determination of potential exhaust gas levels of PFOA that may emanate  
35 from laboratory-scale combustion testing under conditions representative of typical municipal  
36 waste combustor operations in the United States.

37  
38 EPA believes that these incineration studies of fluoropolymers will develop data needed  
39 by the Agency to determine whether municipal and/or medical waste incineration of  
40 fluoropolymers is a potential source of PFOA that may contribute as a pathway to environmental  
41 and human exposures. The data may also be used to inform screening level human and

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004**  
**FLUOROPOLYMER ECA DRAFTING COMMITTEE**

1 environmental exposure assessments. In addition, the data may also be used by other Federal  
2 agencies (e.g., the Agency for Toxic Substances and Disease Registry (ATSDR), the National  
3 Institute for Occupational Safety and Health (NIOSH), the Occupational Safety and Health  
4 Administration (OSHA), and the Consumer Product Safety Commission (CPSC), the Food and  
5 Drug Administration (FDA)) in assessing chemical risks and in taking appropriate actions within  
6 their programs. It is intended that the data generated under this ECA will identify whether the  
7 incineration of fluoropolymers contributes to the sources and pathways of environmental and  
8 human exposure to PFOA.

9  
10  
11 **VI. SCOPE OF THE PROGRAM**

12  
13 The scope of this testing program is described in Parts VII and VIII below and will  
14 consist of the testing listed in Table 1 in accordance with the test standards specified in Table 1  
15 and described in Appendix B.1 and C.1 - C.2 as annotated by Appendix D.1- D.4 to this ECA  
16 ("Test Standards") and submitting the reports and documents specified in Table 1 in accordance  
17 with the deadlines set forth in Table 1 and described in Appendices C.1 - C.2 and E.1- E.2.

18  
19  
20 **VII. DESCRIPTION OF THE TESTING PROGRAM**

21  
22 The program has two segments as follows: Phase I PFOA Transport Testing and Phase II  
23 Fluoropolymer Incineration Testing.

24  
25 A. Phase I PFOA Transport Testing: Phase I will consist of quantitative transport  
26 efficiency testing for PFOA. Phase I testing for PFOA transport efficiency is specified in the  
27 Phase I PFOA Transport Testing segment of Table 1 and described in Appendix C.1 as annotated  
28 by Appendix D.1 and D.2. At the conclusion of Phase I testing, the Companies, will provide  
29 EPA with a letter report summarizing the results. In the event that the transport efficiency of  
30 PFOA or total fluorine (as determined by the formulas in Appendix C.1) is equal to or greater  
31 than 70%, testing will proceed to Phase II Fluoropolymer Incineration Testing. In the event the  
32 transport efficiency of PFOA or total fluorine (as determined by the formulas in Appendix C.1) is  
33 less than 70%, the Companies will initiate a technical consultation with EPA (see Part VII. B.  
34 and Part VIII of this ECA).

35  
36 B. Phase II Fluoropolymer Incineration Testing: This testing, specified in the Phase II  
37 Fluoropolymer Incineration Testing segment of Table 1 and described in Appendix C.2 as  
38 annotated by Appendices B.1, D.1, D.2, D.3, D.4, and E.2; and will include the following for  
39 each fluoropolymer composite to be tested under this ECA: 1) elemental analysis, 2) combustion

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
FLUOROPOLYMER ECA DRAFTING COMMITTEE**

1 stoichiometry, 3) thermogravimetric analysis, 4) laboratory-scale combustion testing, and, 5) if  
2 required under this ECA,<sup>3</sup> release assessment reporting.

3  
4  
5 **VIII. PHASE I TECHNICAL CONSULTATION**

6  
7 A. Following completion of Phase I and prior to the initiation of Phase II, the  
8 Companies will submit a letter report to EPA with the results for the recovery across the  
9 laboratory-scale thermal reactor system, as determined from Phase I testing.

10  
11 B. If the recovery for either PFOA or Total Fluorine (as determined by the formulas in  
12 Appendix C.1) is greater than or equal to 70%, the Companies will proceed to Phase II testing.

13  
14 C. If the recovery for both PFOA and Total Fluorine (as determined by the formulas in  
15 Appendix C.1) is less than 70%, a Technical Consultation will be held between the Companies  
16 and EPA. The objective of the Technical Consultation will be to reach agreement on how to  
17 proceed. The technical consultation will review the outcomes of the Phase I PFOA Transport  
18 Efficiency Testing, discuss the feasibility of proceeding with Phase II Testing as described in this  
19 ECA, and discuss whether additional modifications are needed to the test standards and/or  
20 protocols described in Appendices B, C and D for Phase I PFOA Transport Testing and/or Phase  
21 II Fluoropolymer Incineration Testing. Specifically, the technical consultation will address: (1)  
22 whether the data from the Phase I PFOA Transport Testing segment provide a sufficient basis for  
23 conducting the laboratory-scale incineration testing specified in the Phase II Fluoropolymer  
24 Incineration Testing segment; (2) the nature and scope of any additional Phase I work that may  
25 be required prior to the commencement of Phase II Testing and reporting (e.g., modifications to  
26 the Advanced Thermal Reactor System) as described in Part VII. B. of this ECA), and/or (3) the  
27 nature and scope of modifications to the protocols and test standards for Phase I and/or Phase II  
28 testing, or the identification of additional testing, that may be needed to complete the testing  
29 under this ECA.

30  
31  

---

<sup>3</sup> In the event that Phase II Fluoropolymer Incineration Testing identifies measurable levels of PFOA (where measurable PFOA is defined to be at or above the limit of quantitation (LOQ) as defined in Appendix D.2) resulting from the incineration testing for any or all of the fluoropolymer composites tested under this ECA (see Part II and Appendix A.1 - A.4 to this ECA), the Companies will prepare a release assessment report (see Table 1 and Appendix E.2 to this ECA) to place in perspective the relevance of such measurable levels in the laboratory-scale incineration testing results with respect to full-scale municipal and/or medical waste incinerator operations in the United States.

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
FLUOROPOLYMER ECA DRAFTING COMMITTEE**

Possible outcomes of the Technical Consultation include, the following:

1. An agreement to conduct additional Phase I testing, and the schedule and standards for such testing, to inform whether and under what conditions to conduct Phase II testing.
2. An agreement to proceed into Phase II testing with or without agreed-to modifications to plans, test standards and schedules for Phase II testing.
3. An agreement to conduct such other testing, and the schedule and standards for such testing, in Phase II that the Companies and EPA agree may be appropriate, in light of Phase I results, to assist in determining the potential for release of PFOA from fluoropolymers during waste incineration.
4. No agreement on a path forward, in which case the Companies' obligations to conduct testing or reporting beyond Phase I PFOA Transport Testing as described in this ECA are terminated.

D. EPA shall place in the docket (OPPT-2003-0071) a summary of any Technical Consultation that is held under this paragraph. In the event modifications to the testing program are agreed to, EPA and the Companies will revise this ECA, as well as Table 1 and the Appendices, as appropriate.

**IX. STANDARDS FOR CONDUCTING TESTING**

A. Testing for the laboratory-scale incineration of the fluoropolymer test substance composites described in Part II of this ECA which contain the fluoropolymers listed in Appendix A.1 of this ECA must be conducted in accordance with the Test Standards listed in Table 1 and described in Appendices B.1 and C.1 - C.2 as annotated in Appendices D.1- D.3 to this ECA. Certain provisions of these Test Standards are considered to be mandatory and are referred to as "requirements." These requirements are identified by the use of the word "shall" in the text of the Test Standard. For the purpose of this ECA, the words "will" and "must," if they appear in the Test Standards, are considered equivalent to the word "shall" and therefore delineate a test requirement to be followed or met.

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
FLUOROPOLYMER ECA DRAFTING COMMITTEE**

1 Provisions that are not mandatory, and are therefore only recommended, are identified by  
2 the use of "should" statements. In the event such "should" provisions are not followed, the  
3 Companies will not be deemed by EPA to be in violation of this ECA and will not be subject to  
4 penalties or other enforcement actions, as described in Part XII. of this ECA. However, in such  
5 cases, EPA will use its professional judgement to determine the scientific adequacy of the test  
6 results and any repeat testing that is determined by EPA to be necessary will be required either  
7 under a separate ECA or pursuant to a rule promulgated under section 4(a) of TSCA, 15 U.S.C.  
8 2603(a).

9  
10 B. The Companies and EPA will consult in a good faith effort to consider the need  
11 for Test Standard modifications if either EPA or the Companies desire such modifications.  
12 Modifications to this ECA will be governed by 40 CFR 790.68 (see Part XI. of this ECA).

13  
14 **\*\*\* FOLLOW-ON DISCUSSION POINT FOR DRAFTING COMMITTEE:**  
15 **[SUMMARY: Discussions are continuing on: (a) appropriate tailoring of GLP**  
16 **requirements to meet the special needs of this test program, and (b) a**  
17 **table providing guidance for the development of quality assurance project**  
18 **plans.]**

19  
20 {original text under discussion}

21 C. All testing required by this ECA must be conducted in accordance with the EPA  
22 Good Laboratory Practice Standards (GLPS) found at 40 CFR part 792.

23  
24  
25 **X. STUDY PLAN(S) AND QUALITY ASSURANCE PROJECT PLAN(S) (QAPP)**

26  
27 The Companies will submit a study plan to EPA for each test conducted pursuant to this  
28 ECA prior to the initiation of testing in accordance with 40 CFR 790.62. (For this ECA, EPA  
29 will not require the plan(s) under this Part of the ECA to be submitted "no later than 45 days  
30 prior to the initiation of testing," as specified at 40 CFR 790.62(a)). The content of the study  
31 plan(s) submitted to EPA will comply with 40 CFR 790.62(b). This ECA and/or its appendices  
32 satisfy the applicable requirements of 40 CFR 790.62(b)(2), (8), (9), and (10). A study plan may  
33 cross reference the applicable provisions of the ECA and/or its appendices to satisfy these  
34 requirements. Also ~~pursuant to Part IX. (C) of~~ for this ECA, the Companies must submit Quality  
35 Assurance Project Plan(s) (QAPP) prepared in accordance with EPA guidance.<sup>4</sup> Modifications

---

<sup>4</sup> Guidance for developing Quality Assurance Project Plans can be found in the EPA document  
EPA QA/R-5: *EPA Requirements for Quality Assurance Project Plans*, prepared by: Office of  
Environmental Information, EPA, March 2001. This is also available from the EPA website at

(continued...)

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
FLUOROPOLYMER ECA DRAFTING COMMITTEE**

1 to the study plan(s) under this part of the ECA will be governed by the procedures of 40 CFR  
2 790.62(c) except that the 15 day time periods in 40 CFR 790.62(c) (2) and (3) will be 45 day  
3 time periods. All study plan(s) will become part of the official record (Docket Control Number  
4 [OPPT-2003-0071].  
5  
6

7 **XI. MODIFICATIONS TO THIS ENFORCEABLE CONSENT AGREEMENT**

8  
9 Modifications to this ECA, if any, will be made according to the procedures contained in  
10 40 CFR 790.68.  
11

12  
13  
14 **XII. FAILURE TO COMPLY WITH THE ENFORCEABLE CONSENT AGREEMENT**

15  
16 The Companies acknowledge that a violation of the requirements of this ECA will  
17 constitute a "prohibited act" under section 15(1) of TSCA, 15 U.S.C. 2614(1), and will trigger all  
18 provisions applicable to a section 15 violation. Further information regarding the implications of  
19 failure to comply with the consent agreement is provided in 40 CFR 790.65.  
20

21  
22 **XIII. EPA MONITORING OF ENFORCEABLE CONSENT AGREEMENT TESTING**

23  
24 EPA may conduct monitoring activities of the testing conducted under this ECA such as  
25 laboratory inspections and study audits, as permitted under section 11 of TSCA, 15 U.S.C. 2610.  
26

27  
28 **XIV. SUBMISSIONS TO EPA AND CONFIDENTIALITY OF INFORMATION**

29  
30 A. All reporting required by this ECA must be submitted by the Companies to EPA  
31 by the dates specified in Table 1 unless otherwise authorized by EPA pursuant to 40 CFR 790.68.  
32 A paper copy of a document shall be deemed submitted when it is either postmarked or placed in  
33 the hands of a commercial courier service for overnight delivery to EPA at the appropriate  
34 address specified in Part XIV. B. of this ECA. Hand-delivered documents are deemed submitted  
35 upon receipt at the appropriate address specified in Part XIV. B. of this ECA. Electronically  
36 transmitted documents are deemed delivered upon transmission and must follow the procedures  
37 for electronic submissions specified in Part XIV.B. of this ECA. Under any of the above

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004**  
**FLUOROPOLYMER ECA DRAFTING COMMITTEE**

1 circumstances, it is the responsibility of the Companies to maintain appropriate documentation  
2 for proof of transmittal for all reporting required by this ECA.

3  
4 In accordance with 40 CFR 790.62 (d), the Companies will submit interim progress  
5 reports to EPA informing the Agency of any proposed changes in standards for the development  
6 of data, study plans, or test schedules, and communicating with the Agency about laboratory  
7 inspections and other matters affecting the progress of testing. The schedule for interim progress  
8 reports is specified in Table 1 of this ECA. The information required in interim progress reports  
9 is specified in Appendix E.1.

10  
11 B. All documents submitted to EPA under this ECA must be identified by the Docket  
12 ID Number (OPPT-2003-0071) and the name: ECA on Laboratory-Scale Incineration Testing of  
13 Fluoropolymers.

14  
15 Submissions made by mail should be sent to: Document Control Office (7407M), Office  
16 of Pollution Prevention and Toxics (OPPT), Environmental Protection Agency, 1200  
17 Pennsylvania Avenue, NW, Washington, DC 20460-0001.

18  
19 Submissions made by hand delivery or courier should be delivered to: OPPT Document  
20 Control Office (DCO) in the EPA East Building, Room 6428, 1201 Constitution Avenue, NW,  
21 Washington, DC and marked Attention: Docket ID Number OPPT- 2003 -0071. The DCO is  
22 open from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The telephone  
23 number for the DCO is (202) 564-8930.

24  
25 Submissions made electronically should be sent to: OPPT Document Control Office at  
26 <http://www.oppt.ncic@epa.gov>, Attention: Docket OPPT-2003-0071. Electronic submissions do not  
27 supersede the requirements of Part XIV. C. of this ECA. Electronic submissions for all reporting  
28 required by this ECA must be submitted as attachments to the e-mail and must be in text-  
29 searchable, PDF format. The e-mail transmitting any report required by this ECA and all  
30 electronic attachments will be included as part of the submission. E-mail addresses are  
31 automatically captured by the EPA e-mail system and become part of the submission that is  
32 placed in the official public docket, and will be made available in the EPA electronic public  
33 docket. Upon receipt of the electronic submission, a "receipt date" is entered into the metadata to  
34 signify the date the document(s) submitted by the Company(ies) was received by EPA. EPA is  
35 not responsible for failure to meet a date of submission requirement if the EPA fire wall rejects  
36 an electronic submission containing a virus or other adverse electronic coding. It is the  
37 obligation of the submitter to confirm that: 1) electronic submissions are received by EPA on the  
38 date of transmission, 2) the electronic submission and all attachments are legible, and 3) the  
39 electronic submission and all attachments meet the electronic format requirements of the EPA  
40 Document Control Office. Do not submit any report containing confidential business

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
FLUOROPOLYMER ECA DRAFTING COMMITTEE**

1 information (CBI) to EPA by e-mail. For submissions containing CBI see Part XIV.D of this  
2 ECA.

3  
4 C. The Companies must submit six (6) paper copies of each version (Public and CBI)  
5 for all reports described in Table 1 and Part VII A. and B. of this ECA. In addition, an electronic  
6 file, on a disk or CD ROM, of all documents submitted under this ECA (marked as CBI where  
7 appropriate and in text-searchable, PDF format) will be provided to EPA. To avoid damage  
8 caused by mail scanning technologies, the electronic file on disk or CD ROM must be hand  
9 delivered or sent by courier to the address cited in Part XIV. A.. See Part XIV. D. regarding  
10 submissions containing CBI.

11  
12 D. Any document submitted to EPA that contains data or information for which a  
13 Signatory Company makes a claim of confidentiality (see Part XV of this ECA), must be  
14 submitted as two separate versions. One version must be complete, with the information being  
15 claimed as confidential marked in the manner described under 40 CFR 790.7. The other, public  
16 version must be identical in all respects except that all of the information claimed as confidential  
17 shall be redacted. EPA will place the public version in the Agency's docket. The complete  
18 version will be treated in accordance with EPA confidentiality regulations in 40 CFR part 2 and  
19 40 CFR 790.7.

20  
21 Data or other information that are considered to be CBI must not be submitted  
22 electronically to EPA by e-mail. Any part or all of data or other information claimed as CBI  
23 must be so marked. If the CBI submission is on diskette or CD ROM, mark the outside of the  
24 diskette or CD ROM as CBI and then identify electronically within the diskette or CD ROM the  
25 specific information that is CBI. Information marked as CBI will not be disclosed except in  
26 accordance with procedures set forth in 40 CFR part 2 (see Part XV of this ECA).

27  
28 Any claims of confidentiality for information submitted under this ECA will be made  
29 under the terms of 40 CFR 790.7. If no claim of confidentiality is made by the submitter of the  
30 information at the time of submission, the information will be deemed by EPA, in accordance  
31 with 40 CFR 790.7, to be public, and may be made available to the public without further notice  
32 to the submitter. Information claimed as confidential will be treated in accordance with the  
33 procedures in 40 CFR part 2 established pursuant to section 14 of TSCA, 15 U.S.C. 2613.

34  
35  
36 **XV. PUBLICATION AND DISCLOSURE OF TEST RESULTS**

37  
38 All results of testing conducted pursuant to this ECA will be announced to the public by  
39 EPA in accordance with the procedures specified in section 4(d) of TSCA, 15 U.S.C. 2603(d).  
40 Disclosure by EPA of data generated by such testing to the public or other government agencies  
41 will be governed by section 14(b) of TSCA, 15 U.S.C. 2613(b), and 40 CFR part 2. The CBI

DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
FLUOROPOLYMER ECA DRAFTING COMMITTEE

1 version of a document will only be provided to another U.S. government organization in  
2 compliance with the procedures described in the OPPTS TSCA CBI Procedure Manual.  
3 [NOTE: Drafting Committee discussions are continuing to finalize this section]  
4  
5

6 **XVI. OTHER RESPONSIBILITIES OF THE COMPANIES**  
7

8 A. The Companies will comply with the notification requirements of section 12(b)(1)  
9 of TSCA, 15 U.S.C. 2611(b)(1), and 40 CFR part 707, subpart D, if they export or intend to  
10 export ethene, tetrafluoro-homopolymer (PTFE) (CAS No. 9002-84-0) or any of the composite  
11 test substances described in Part II and Appendix A.3 of this ECA. Any other person who  
12 exports or intends to export ethene, tetrafluoro-homopolymer (PTFE) (CAS No. 9002-84-0) or  
13 any of the composite test substances described in Part II and Appendix A.3 of this ECA is subject  
14 to the above cited export notification requirements  
15

16 B. If any of the fluoropolymer chemicals listed in Appendix A.1 to this ECA become  
17 subject to a rule promulgated under TSCA section 5(a)(2), 15 U.S.C. 2604(a)(2), governing  
18 significant new uses of any of the fluoropolymer chemicals listed in Appendix A.1 to this ECA,  
19 then the Companies will be subject to the data submission requirements imposed by section  
20 5(b)(1)(A) of TSCA, 15 U.S.C. 2604(b)(1)(A), as if the testing under this ECA had been required  
21 by a TSCA section 4 test rule.  
22  
23

24 **XVII. SEVERABILITY OF ENFORCEABLE CONSENT AGREEMENT PROVISIONS**  
25

26 In the event that one or more provisions of this ECA are determined by a court decision to  
27 be unenforceable, the remaining provisions of this ECA will not be presumed to be valid, and  
28 EPA will either initiate a rulemaking proceeding to require testing or publish in the Federal  
29 Register the reasons for not initiating such a proceeding.  
30  
31

32 **XVIII. FINAL AGENCY ACTION**  
33

34 For purposes of 5 U.S.C. 704, publication of the FR notice announcing the issuance of the  
35 Order incorporating this ECA constitutes final agency action..  
36  
37

38 **XIX. PUBLIC RECORD**  
39

40 EPA has established a public record which will contain this ECA, the Order that  
41 incorporates this ECA, the Federal Register notice announcing issuance of the Order

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
FLUOROPOLYMER ECA DRAFTING COMMITTEE**

1 incorporating this ECA, and any and all relevant information, subject to the confidentiality  
2 provisions of section 14(b) of TSCA and 40 CFR part 2. The official record for this ECA,  
3 including the public version, which does not include any information claimed as CBI, has been  
4 established under Docket Control Number OPPT-2003-0071.  
5

6 An electronic version of the public docket is available through EPA's electronic public  
7 docket system, EPA Dockets. EPA Dockets may be accessed at <http://www.epa.gov/edocket/> to  
8 access the index listing of the contents of the official public docket, and to access those  
9 documents in the public docket that are available electronically. Although not all docket  
10 materials may be available electronically, (for example the materials in the original dockets for  
11 this action, [AR-226 and OPPTS-2003-0012], or materials under copyright), can be access any of  
12 the publicly available docket materials through the EPA Docket Center, Rm. B102-Reading  
13 Room, EPA West, 1301 Constitution Ave., NW., Washington, DC. For materials available in  
14 the electronic docket, once in the system, select "search," then key in the appropriate Docket ID  
15 number (OPPT-2003-0071).  
16

17  
18 **XX. EFFECTIVENESS**  
19

20 This ECA may be signed in separate counterparts. This ECA will not be effective unless  
21 signed by each of the Companies and by EPA. This ECA will take effect on the date of  
22 publication of the Federal Register notice announcing the issuance of the Order that incorporates  
23 this ECA.  
24

25  
26 **XXI. RIGHTS OF THE COMPANIES**  
27

28 By signing this ECA, the Companies waive their right to challenge EPA's authority to  
29 assess penalties for violations of the terms of this ECA. This waiver does not affect any other  
30 rights that the Companies may have under TSCA, including the right to dispute the amount of  
31 any penalty or to dispute factually whether a violation of the terms of this ECA has occurred, or  
32 to seek judicial review of any rule that may be adopted by EPA that imposes requirements to test  
33 any of the fluoropolymer chemicals listed in Appendix A.1 to this ECA.  
34

35  
36 **XXII. RESERVATION OF RIGHTS BY COMPANIES**  
37

38 By signing this ECA, the Companies are not admitting that the requirements of TSCA  
39 Section 4 have been satisfied for promulgating a test rule to generate the data required by this  
40 ECA.  
41

1 The Companies contend that the documents generated for the incineration testing  
2 program under this ECA are protected from public disclosure under 5 U.S.C. section 552(b)(4)  
3 and 15 U.S.C. section 2613(a) and do not constitute studies subject to disclosure under 15  
4 U.S.C. section 2613(b). Accordingly, the public information disclosure provisions of this ECA  
5 are, in the view of the Companies, a waiver of legal rights.  
6

1 Table I REQUIRED TESTING, TEST STANDARDS, REPORTING AND OTHER  
2 REQUIREMENTS FOR THE LABORATORY-SCALE INCINERATION TESTING OF  
3 FLUOROPOLYMERS  
4

Phase I PFOA Transport Testing	Test Standard or ECA Requirement	Deadline for Final Report (Months) <sup>1</sup>
Phase I Study Plan(s)	40 CFR 790.62 (b) as annotated by Part X of the ECA	<u>? TBD ?</u> <sup>3</sup>
Phase I QAPP submission	<u>see Appendix ?? G ?? to the ECA</u>	<u>? TBD ?</u> <sup>3</sup>
Quantitative PFOA transport analysis <sup>2</sup>	See appendix C.1 as annotated in appendix D.?)	<u>? TBD ?</u> <sup>4 5</sup>

16

---

<sup>1</sup> Interim progress reports must be submitted by the Companies to EPA every 6 months beginning six months from the effective date of the Order that incorporates this ECA until the end of the ECA testing program (see Part XIV and Appendix E.1 of the ECA).

<sup>2</sup> At the conclusion of Phase I PFOA transport efficiency testing, and prior to initiation of Phase II, the Companies, will provide a letter/report to EPA summarizing the results of Phase I testing (see Part VII. A. of the ECA). In the event that the transport efficiency of PFOA or of total fluorine (as determined by the formulas in Appendix C.1) is greater than or equal to 70% then testing will proceed to Phase II Incineration Testing. In the event that the transport efficiency of PFOA or of total fluorine (as determined by the formulas in Appendix C.1) is less than 70% then the Companies will initiate a Technical Consultation with EPA to determine under what conditions Phase II testing can proceed. The outcomes of the Technical Consultation are described in Part VIII of this ECA.

<sup>3</sup> Number of months after the effective date of the Order that incorporates this ECA when submission is due.

<sup>4</sup> [NOTE: Drafting Committee discussions are continuing to finalize this section]

**APPENDIX A.1**

**LIST OF CHEMICAL COMPONENTS OF THE COMPOSITES<sup>1</sup>**

The following table lists the thirteen commercial fluoropolymer chemicals (made using ammonium perfluorooctanoate (APFO)) that are the subject to this ECA.

The identities of the fluoropolymers (made using APFO) that are components of the composites that are subject to this ECA were provided to EPA as support documentation of the Companies' LOI commitments. Some of this documentation, including certain aspects related to the identity of the test substance as described in Part II of this ECA and the table below, may contain Confidential Business Information (CBI). In such instances EPA creates a comprehensive database for evaluation and comparison, and, when possible, provides a public version sanitized of CBI.

Subsequent analysis of the list of fluoropolymers received by EPA supported the conclusion that the individual chemicals listed below are representative of all known commercial fluoropolymer chemicals and the basic chemistries are represented by the four composite test substances that are subject to testing under this ECA (i.e., dry melt fluoropolymer resin, dry non-melt PTFE homopolymer resin/gum, dry non-melt fluoroelastomer resin/gum, aqueous fluoropolymer dispersions) (see ECA Appendix A.2 and A.3). The fluoropolymer structure is predominantly  $-(CF_2)_x-$  which is a potential source of PFOA. For all fluoropolymer products used in commerce, the  $-(CF_2)-$  moiety is common to all polymers and the composites to be tested under this ECA testing program (see Appendix A.2-A.4) are representative of the individual component and non-component fluorochemicals.

---

<sup>1</sup> There is a Public and CBI version of Appendix A.1 because the Companies have asserted that details describing their chemical(s) are considered by them to be entitled to treatment as TSCA confidential business information (CBI) (see Part XIV. D. of this ECA regarding confidentiality of information).

APPENDIX A.2  
2. Selection

Review of Figure A-1 demonstrates that fluoropolymers industry products can be divided into 3 broad categories representative classes as follows:

- Dry melt resins
- Dry non-melt resins and gums
- Aqueous dispersions

These three broad categories can in turn be divided into four representative classes as follows:

- Dry melt resins
  1. FEP, PFA, THV, ETFE, HTE
- Dry non-melt resins and gums
  2. PTFE resin
  3. Fluoroelastomer gums
- Aqueous dispersions
  4. PTFE, FEP, PFA, THV

Composite samples of each of these four representative classes were selected as the test substance for this testing program in order to represent the entire range of fluoropolymers involved.

**APPENDIX A.3**

**COMPOSITION OF COMPOSITES TO BE TESTED<sup>1</sup>**

**[NOTE: Drafting Committee discussions are continuing to finalize this section]**

---

<sup>1</sup> There is a Public and CBI version of Appendix A.3 because the Companies have asserted that details describing their chemical(s) are considered by them to be entitled to treatment as TSCA confidential business information (CBI) (see Part XIV. D. of this ECA regarding confidentiality of information).

1 APPENDIX A  
 2 APPENDIX A.3  
 3 1. Identification

4 The four composite test substances for this test program  
 5 will be prepared from the fluoropolymers identified in the  
 6 March 14, 2003 Letter of Intent (LOI) submitted by the  
 7 Society of the Plastics Industry on behalf of the four LOI  
 8 signatories (as corrected). The specific fluoropolymer  
 9 types (with CAS numbers and associated monomers) going into  
 10 each of the four composite test substances (grouped as  
 11 shown) are presented in Table A-1 below. Each  
 12 fluoropolymer used in each relevant test substance  
 13 composite will have been made using APFO.  
 14

15 Table A-1. Test Substance Composites by Type and CAS Number

Test Substance	Fluoropolymer Type	CAS Number	Associated Monomers
Composite 1 - PTFE resin (dry non-melt)	PTFE	9002-84-0	TFE
Composite 2 - Dry melt resins	FEP	25067-11-2	TFE, HFP
	PFA	26655-00-5 31784-04-0	TFE, PPVE TFE, PEVE
	THV	25190-89-0	TFE, HFP, VDF
	ETFE	68258-85-5	TFE, E
	HTE	35560-16-8	TFE, HFP, E
Composite 3 - Fluoroelastomers (dry non-melt)	Fluoroelastomer Copolymers	9011-17-0	VDF, HFP
	Fluoroelastomer Terpolymers	25190-89-0	TFE, HFP, VDF
	Base resistant elastomers	54675-89-7, 27029-05-6	TFE, VDF, P TFE, P
	Perfluoroelastomers	26425-79-6	TFE, PMVE
	CTFE elastomers	9010-75-7	CTFE, VDF
	Low temperature elastomers	CBI	TFE, VDF

31 APPENDIX A.4

32 3. Preparation of Fluoropolymer Composites

33  
34 3.1 Approach

35  
36 A composite mixture of representative fluoropolymers, as  
37 solids, will be prepared for each of the four test  
38 substance composites identified in Table A-1.

39  
40 The polymer samples will be first quality product polymer,  
41 substantially free of inorganic constituents. Each sample  
42 will be from a representative grade for each applicable  
43 fluoropolymer type from each applicable company.

44  
45 A hypothetical example for Composite 2 in Table A-2 below  
46 shows how the composites will be assembled. In this

1 example with 4 types across 4 companies, there are 11 x's.  
2 Hence, composite 2 would be made up of 11 equal proportions  
3 of the materials indicated with an x.

4  
5

Table A-2. Example for Compositing Across Companies & Types

Test Substance	Fluoropolymer Type	Company A	Company B	Company C	Company D
Composite 2	Type 1		x	x	x
	Type 2	x	x	x	x
	Type 3			x	
	Type 4	x	x	x	

6  
7 For Composite 1 - PTFE resin (where there is a single  
8 fluoropolymer type), a representative sample of PTFE resin  
9 from each company producing PTFE resin will be mixed  
10 together in equal proportions across applicable companies  
11 to form the Composite 1 - PTFE resin.

12  
13 3.2 Preparation

14  
15 Representative samples of each component from each  
16 applicable company for each composite will be sent to the  
17 laboratory(ies) in packaging customarily used for product  
18 sample packaging or in polyethylene, polypropylene, or  
19 glass containers.

20  
21 Each composite will be prepared under laboratory conditions  
22 designed to prevent cross-contamination and designed to  
23 assure solids temperatures less than or equal to 60 °C.

24  
25 Following preparation of each composite, the composite will  
26 be placed in a polyethylene, polypropylene, or glass  
27 container.

28  
29 3.2.1 Composite 1

30  
31 PTFE resin is available in powder form. Equal weights of  
32 PTFE resin powder samples across applicable companies will  
33 be mixed together in dry form to yield Composite 1.

34  
35 3.2.2 Composite 2

36  
37 PEP, PFA, THV, ETFE, and HTE dry melt resins are available  
38 in pellet form. Each component of Composite 2 will be  
39 size-reduced (e.g., ground) to produce powder. Equal  
40 weights of the powder form of each component (following the

1 approach in the example for Composite Z in Section 3.1)  
2 will be mixed together in dry form to yield Composite 2.

3  
4 A sample of polyethylene pellets will be size-reduced using  
5 the same technique and equipment to provide a blank. The  
6 resulting polyethylene powder will be archived.

7  
8 *(text on size reduction blank under further development)*

9  
10 3.2.3 Composite 3

11  
12 Fluoroelastomers are available in slab, lump, or sheet  
13 form. Composite 3 will be prepared following one of the  
14 following approaches:

15  
16 a) Equal weights of each component (following the approach  
17 in example for Composite Z in Section 3.1) will be mixed  
18 on a rubber mill to produce a homogenous slab of preset  
19 thickness to yield Composite 3.

20  
21 Or

22  
23 b) Each component of Composite 3 will be cryogenically  
24 cooled (to make the elastomers brittle) and size-reduced  
25 (e.g., ground) to produce powder. Equal weights of the  
26 powder form of each component (following the approach in  
27 the example for Composite Z in Section 3.1) will be mixed  
28 together in dry form to yield Composite 3.

29  
30 A sample of non-fluorinated synthetic rubber will be size-  
31 reduced using the same technique and equipment to provide a  
32 blank. The resulting non-fluorinated rubber sample will be  
33 archived.

34  
35 *(text on size reduction blank under further development)*

36  
37 3.2.4 Composite 4

38  
39 Aqueous dispersions of PTFE, FEP, PFA, and THV are  
40 available as dispersions containing 20 to 60% fluoropolymer  
41 solids by weight. Composite 4 will be prepared following  
42 one of the following approaches:

43  
44 a. Equal weights (on a dry solids basis) of each component  
45 in aqueous dispersion form (following the approach in  
46 example for Composite Z in Section 3.1) will be mixed  
47 together in liquid form. Solids will be separated from

1 the resulting liquid composite to yield low water content  
2 (i.e., drip free) fine solids.

3  
4 Or

5  
6 b) Solids will be separated from liquid for each component  
7 of Composite 4 to yield low water content (i.e., drip  
8 free) fine solids for each component. Equal weights of  
9 the solids form of each component (following the approach  
10 in the example for Composite Z in Section 3.1) will be  
11 mixed together to yield Composite 4.

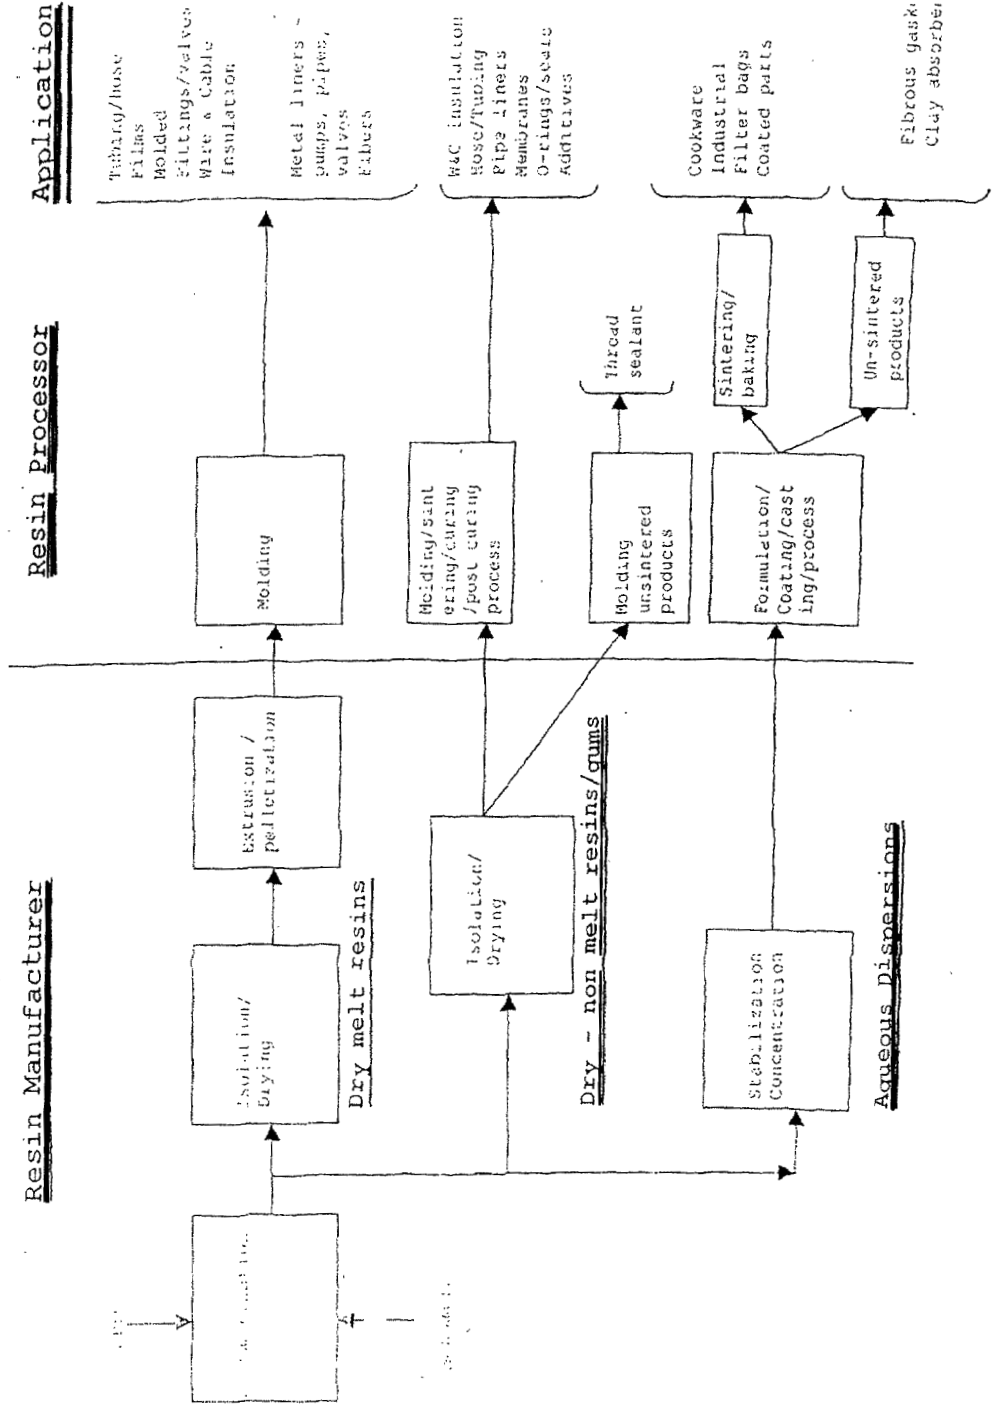

### 12 13 3.3 Verification

14  
15 In order to assure that composite samples in this testing  
16 program have been made up of clearly identified materials,  
17 the preparation of the composites will include formal Chain  
18 of Custody procedures. A chain of custody form will be  
19 included with each component material going into the  
20 composite to show the identity of the component material  
21 and each transfer of custody from its point of origination  
22 to preparation of the composite. For documentation, the  
23 laboratory preparing a given composite will generate a  
24 report to be submitted to EPA as CBI along with a sanitized  
25 version for the public record from which CBI has been  
26 removed.

27  
28 Once prepared, each composite will be accompanied by a new  
29 chain of custody until it reaches the incineration testing  
30 facility.

**APPENDIX B**

**TEST STANDARDS**

**B.1 ASTM E 18680-02 Loss-on-Drying by Thermogravimetry**

**APPENDIX B.1**  
**GUIDELINE FOR THERMOGRAVIMETRIC ANALYSIS**

ASTM E 1868-02 "Standard Test Method for Loss-On-Drying by Thermogravimetry" will be used as the guideline for conducting the analysis described in Appendix C.2.3 with the following modifications for this testing program:

Section	Modification
2.1	<ul style="list-style-type: none"> <li>Standard practices at the University of Dayton Research Institute (UDRI) may be used as references throughout the standard in place of the ASTM standards noted in this section.</li> </ul>
4.1	<ul style="list-style-type: none"> <li>The loss-on-drying value specified in the second through fifth sentences of this section will not be recorded.</li> </ul>
7.1.3	<ul style="list-style-type: none"> <li>The programming rate of the furnace will be set at 10 to 25°C/min, rather than 5°C/min. Pursuant to section 11.6, the temperature program rate will be documented in the report.</li> <li>The isothermal temperature within the range of 25 to 1000°C will be maintained <math>\pm 3^\circ\text{C}</math>, rather than <math>\pm 2^\circ\text{C}</math>.</li> </ul>
7.1.4	<ul style="list-style-type: none"> <li>The specimen atmosphere control system will be capable of supplying dry air in addition to "inert dry gas (usually purified grade nitrogen)".</li> </ul>
7.1.7	<ul style="list-style-type: none"> <li>The temperature program rate will be set at 10 to 25°C/min, rather than 5°C/min. Pursuant to section 11.6, the temperature program rate will be documented in the report.</li> <li>The temperature program rate will be controlled to within the range of <math>\pm 3^\circ\text{C}/\text{min}</math>, rather than <math>\pm 0.1^\circ\text{C}/\text{min}</math>.</li> <li>Within the range of 25 to 1000°C, the isothermal temperature will be maintained within <math>\pm 3^\circ\text{C}</math>, rather than <math>\pm 2^\circ\text{C}</math>.</li> </ul>
11.4	<ul style="list-style-type: none"> <li>The mass of the test specimen noted in the first sentence of this section will be 0.005 to 5 mg, rather than <math>10 \pm 1</math> mg (i.e., 9 to 11 mg).</li> </ul>
11.6	<ul style="list-style-type: none"> <li>The test specimen heating rate will be set at 10 to 25°C/min, rather than 5°C/min noted in the first sentence of this section. Pursuant to section 11.6, the temperature program rate will be documented in the report.</li> </ul>
11.9	<ul style="list-style-type: none"> <li>Termination criteria will follow Test Method A as</li> </ul>

B.1-1

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

	outlined in section 11.10.1.
11.10.1	• The "fixed period of test time" mentioned in this section will be set at 5 min.
11.10.1.1	• Loss-on-drying values will not be recorded.
12.1	• The loss-on-drying value will not be calculated.
13.1.1	• The "identification and description of the material being tested" will be consistent with the information known to the analyst.
13.1.5	• The loss-on-drying value will not be included in the report.
14.2	• This section is not applicable because the Test Method A termination criteria will be used.

## APPENDIX C

### PROTOCOLS AS TEST STANDARDS

- C.1 Transport Efficiency Testing
- C.2 Incineration Testing
  - C.2.1 Elemental Analysis
  - C.2.2 Combustion Stoichiometry
  - C.2.3 Thermogravimetric Analysis
  - C.2.4 Combustion Testing
  - C.2.5 Study Reporting

1 **APPENDIX C.1**2 **PFOA TRANSPORT TESTING**

3

## 4 C.1.1 Significance

5

6 Testing will be performed to verify that potential PFOA  
7 emissions from the combustion testing described in Appendix  
8 C.2 can be quantitatively transported from the high  
9 temperature reactor into the exhaust gas sampling apparatus  
10 (aqueous solution bubblers).

11

12 Acceptable PFOA transport will be demonstrated if the  
13 transport efficiency (as computed in one or more of the  
14 formulas below) is greater than or equal to 70%.

15

## 16 C.1.2 Experimental Plan

17

## 18 C.1.2.1 Base Plan

19

20 Transport of PFOA across the laboratory-scale thermal  
21 reactor system described in Appendix C.2.4 and into the  
22 exhaust gas bubblers described in Appendix D.1 will be  
23 quantitatively determined as an indication of transport  
24 from the high temperature reactor into the bubblers.

25

26 A PFOA standard of known purity greater than or equal to  
27 97% will be gasified at 150 to 250 °C (based on  
28 thermogravimetric analysis of PFOA) with transfer line and  
29 reactor temperatures 0 to 100 °C higher than the  
30 gasification temperature.

31

32 Three replicate transport efficiency test runs will be  
33 conducted. A minimum of one blank run will be conducted  
34 prior to each transport efficiency test run.

35

36 The sample size of the PFOA standard to be gasified will be  
37 less than 5 mg. The reactor exhaust gas will be collected  
38 into bubbler aqueous solution as described in Appendix D.1  
39 (including an HPLC water rinse of the flexible tubing [used  
40 to connect the thermal reactor system and the bubbler  
41 assembly] into the aqueous solution composite), which will  
42 be analyzed for PFOA as described in Appendix D.2. In  
43 order to provide a second way of demonstrating quantitative  
44 transport, this aqueous solution composite will also be  
45 analyzed for total fluorine as described in Appendix D.3.  
46 (Testing for total fluorine is included due to possibility  
47 of thermal degradation of PFOA under transport test

C.1-1

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 conditions.) Therefore, for this transport testing the  
2 amount of PFOA fed to the thermal reactor system will be  
3 sufficiently high to assure that the total fluorine input  
4 to the thermal reactor system will be greater than 140% of  
5 the mass corresponding to the limit of quantitation (LOQ)  
6 for total fluorine in the aqueous solution composite. (The  
7 LOQ for total fluorine in aqueous solution is much higher  
8 than the LOQ for PFOA in aqueous solution.)

9  
10 The amount of PFOA and total fluorine in the thermal  
11 reactor system exhaust gas will be determined via analysis  
12 of the aqueous solution composite as noted above.

13  
14 The amount of PFOA fed to the thermal reactor system will  
15 be known based on measurement prior to gasification and  
16 will be verified by weighing the pyroprobe insert cartridge  
17 before and after each test run. The amount of fluorine  
18 input to the system will be calculated from the amount of  
19 PFOA fed, the known purity of the PFOA, and the known  
20 fluorine fraction of the PFOA standard.

21  
22 PFOA transport efficiency (TE) as a percentage will be  
23 computed as follows:

24  
25 
$$\% \text{ PFOA TE} = \frac{\text{mass of PFOA in aqueous solution composite}}{\text{mass of PFOA fed to thermal reactor system}} * 100 \quad (1)$$

26  
27  
28 Total fluorine (TF) transport efficiency as a percentage  
29 will be computed as follows:

30  
31 
$$\% \text{ Total F TE} = \frac{\text{mass of total F in aqueous solution composite}}{\text{mass of total F fed to thermal reactor system}} * 100 \quad (2)$$

#### 32 33 34 C.1.2.2 Contingent Testing

35  
36 If the transport efficiencies for both PFOA (equation 1)  
37 and total fluorine (equation 2) are less than or equal to  
38 70%, then additional work will be performed. This  
39 additional work will be performed in a step-wise fashion to  
40 determine if consideration of one or more of the following  
41 procedural revisions enables achievement of 70% transport  
42 efficiency as follows:

43  
44 Step 1. The flexible tubing between the thermal reactor  
45 system and the bubbler assembly from the experiment  
46 described in Section C.1.2.1 would be  
47 quantitatively rinsed with methanol. This methanol  
48 rinsate would be analyzed for PFOA (as described in

C.1-2

1 Appendix D.2) and/or for total fluorine (as  
2 described in Appendix D.3). Revised transport  
3 efficiency (TE) as a percentage for PFOA (equation  
4 3) and/or total fluorine (equation 4) would be  
5 computed by including the mass of analyte in the  
6 methanol rinse in the numerator as follows:

$$7$$

$$8$$

$$9 \quad \% \text{ PFOA TE} = \frac{\text{mass}_{\text{PFOA out}}}{\text{mass}_{\text{PFOA in}}} * 100 \quad (3)$$

$$10$$

11 where  $\text{mass}_{\text{PFOA out}}$  = mass of PFOA in bubbler  
12 aqueous solution composite  
13 + mass of PFOA in methanol  
14 rinse

15 and  $\text{mass}_{\text{PFOA in}}$  = mass of PFOA fed to thermal  
16 reactor system

$$17$$

$$18$$

$$19$$

$$20$$

$$21 \quad \% \text{ Total F TE} = \frac{\text{mass}_{\text{total F out}}}{\text{mass}_{\text{total F in}}} * 100 \quad (4)$$

$$22$$

23 where  $\text{mass}_{\text{total F out}}$  = mass of total F in  
24 bubbler aqueous  
25 solution composite  
26 + mass of total F in  
27 methanol rinse .

28 and  $\text{mass}_{\text{total F in}}$  = calculated mass of  
29 total F in PFOA fed to  
30 thermal reactor system

31  
32  
33  
34 Step 2 (if necessary) The experiment described in Section  
35 C.1.2.1 would be repeated with  
36 reagent(s) (e.g. NaOH) added to the  
37 bubbler aqueous solution to determine  
38 if reagent addition enhances analyte  
39 absorption, thereby improving transport  
40 efficiency. Transport efficiency would  
41 be calculated using equation (1) and/or  
42 (2) above. The impact of reagent  
43 addition on LOQ for PFOA analysis  
44 described in Appendix D.2 would be  
45 determined.

#### 46 C.1.3 Reporting of Results

47  
48  
49 Following completion of PFOA transport testing as described  
50 in this appendix and prior to beginning incineration  
51 testing described in Appendix C.2, a letter report will be

C.1-3

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 submitted to EPA with the transport efficiency result(s)  
2 and indication of what contingent testing, if any, was  
3 performed.  
4  
5 If Appendix C.2 incineration testing is performed, the  
6 detailed results of Appendix C.1 transport testing will be  
7 included in the final report for Appendix C.2 incineration  
8 testing. If Appendix C.2 incineration testing is not  
9 performed, the detailed results of Appendix C.1 transport  
10 testing will be provided in a test report for Appendix C.1  
11 transport testing.

C.1-4

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 **APPENDIX C.2**  
2 **INCINERATION TESTING**

3  
4 **C.2.1 Elemental Analysis**

5  
6 C.2.1.1 Introduction

7  
8 Elemental analysis as described in Section C.2.1 will be  
9 performed for each test substance composite to aid in  
10 preparation for combustion testing described in Section  
11 C.2.4.

12  
13 As Kissa (1998) points out, technique strongly affects  
14 analytical results for fluorinated organic compounds such  
15 as fluorinated surfactants and fluorinated polymers due to  
16 the strength of the carbon-fluorine bond:

17  
18 Fluorine in organic compounds is usually determined by  
19 converting organic fluorine to an inorganic fluoride.  
20 Various combustion methods are routinely used for this  
21 purpose. However, the carbon-fluorine bond is  
22 exceptionally strong, and extremely vigorous conditions are  
23 needed for a quantitative mineralization. Conventional  
24 combustion conditions used for the determination of carbon  
25 and hydrogen in nonfluorinated organic compounds are not  
26 adequate for a quantitative analysis of fluorinated  
27 surfactants.

28  
29 Therefore, total fluorine analysis will be performed using  
30 "extremely vigorous conditions" as described in Section  
31 C.2.1.2, and the commercially available conventional  
32 technique used for empirical determination of carbon and  
33 hydrogen content (described in Section C.2.1.3) will  
34 provide estimated values.

35  
36 C.2.1.2 Total Fluorine

37  
38 Each test substance composite will be characterized via  
39 analysis of total fluorine content.

40  
41 Based on manufacturing process knowledge, the levels of  
42 total fluorine in the components of test substance  
43 composites are orders of magnitude higher than the  
44 potential trace level of inorganic fluoride in these  
45 materials. Therefore, for this test program, the total  
46 organic fluorine value for each test substance composite  
47 will be considered to be the same as the total fluorine  
48 value.

49

C.2-1

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 Total fluorine content will be measured via the Wickbold  
2 Torch method; see Appendix D.3.

3  
4 C.2.1.3 Carbon and Hydrogen

5  
6 In order to provide information for stoichiometric  
7 calculations in Section C.2.2, the carbon and hydrogen  
8 content of each test substance composite is needed. Based  
9 on manufacturing process knowledge of the polymers in this  
10 program, levels of sulfur, and nitrogen are expected to be  
11 less than 0.1% and to thereby have negligible effect on  
12 stoichiometric calculations.

13  
14 C.2.1.3.1 Theoretical Determination

15  
16 Where the elemental composition of a test substance  
17 composite is known from the identity of the components in a  
18 given composite, the carbon and hydrogen content of the  
19 test substance composite can be calculated.

20  
21 For example, where each of the components of a test  
22 substance composite are polytetrafluoroethylene (PTFE), the  
23 carbon and hydrogen can be determined knowing the molecular  
24 formula for PTFE is  $(C_2F_4)_n$  as follows:

25

	number	atomic weight	weight %
carbon (C)	2	12	24
hydrogen (H)	0	1	0
fluorine (F)	4	19	76
total			100

26  
27 C.2.1.3.2 Empirical Determination

28  
29 Where compositional information on carbon and hydrogen  
30 content is not known from the identity of the components in  
31 a given composite, each such test substance composite will  
32 be analyzed for carbon and hydrogen.

33  
34 As noted in Section C.2.1.1, empirical determination of  
35 carbon in test substance composites via commercially  
36 available conventional techniques is expected to  
37 underestimate the carbon content of the test substance  
38 composites due to the strength of the carbon-fluorine bond.  
39 Similarly, empirical determination of hydrogen in test  
40 substance composites via commercially available  
41 conventional techniques is expected to overestimate the  
42 hydrogen content of the test substance composites.

43

C.2-2

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 The carbon content of the test substance composite can be  
2 measured by determining the carbon dioxide (CO<sub>2</sub>) generated  
3 by the oxidation of the sample. This oxidation may be  
4 accomplished by high temperature combustion, catalytic  
5 combustion, or wet chemical oxidation. The CO<sub>2</sub> is measured  
6 directly by an infrared detector or a thermal conductivity  
7 detector, via absorption into a suitable solution (e.g.,  
8 potassium hydroxide) and gravimetric determination, or by  
9 conversion to methane for measurement via a flame  
10 ionization detector.

11  
12 The hydrogen content of the sample can be determined by  
13 difference with knowledge of the fluorine content and  
14 carbon content of the sample where the moisture content and  
15 chlorine content of the sample are negligible or known.  
16 Alternatively, the hydrogen content of the sample is  
17 measured by determining the water generated by high  
18 temperature combustion of the sample. Measurement of water  
19 in the combustion gas for this analysis may be accomplished  
20 by techniques such as use of an infrared detector or  
21 absorption on a dessicant with gravimetric determination.  
22 With empirical hydrogen determination, it is important to  
23 correct for the water in the combustion gas attributable to  
24 the moisture content in the sample to obtain the hydrogen  
25 content of the sample; see Section C.2.1.4.

26  
27 Manufacturing process knowledge of the polymers will be  
28 used to review the elemental analysis results and to form  
29 the basis for interpreting non-detects. For example, if  
30 the hydrogen analytical result for a perfluorinated polymer  
31 is less than a quantitation limit of 0.1%, then the  
32 analytical result will be replaced with 0.

#### 33 34 C.2.1.4 Moisture

35  
36 Where preparation (as described in Appendix A.4) for a  
37 given test substance composite has involved dewatering, the  
38 moisture (or solids) content of each such test substance  
39 composite will be determined in order to provide a dry  
40 basis for calculations as needed.

41  
42 Moisture is determined by measuring the loss of weight of  
43 the sample when heated under controlled conditions. A  
44 representative sample is weighed and placed in a crucible  
45 (or dish) and evaporated to dryness in an air or nitrogen  
46 atmosphere at a defined temperature setpoint (e.g., 103 °C  
47 to 105 °C) in the range of 100 °C to 125 °C.

C.2-3

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 The moisture value is calculated as the loss in weight  
2 (difference between the starting weight of sample and the  
3 final weight of sample) divided by the starting weight of  
4 sample. Similarly, a solids value can be calculated as the  
5 final weight of sample divided by the starting weight of  
6 sample.

7

### 8 **C.2.2 Combustion Stoichiometry**

9

10 Combustion stoichiometry calculations as described in  
11 Section C.2.2 will be performed to aid in preparation for  
12 combustion testing described in Section C.2.4

13

14 First, the weight percent values from Section C.2.1 are  
15 converted to molar quantities on a dry basis.

16

17 Second, based on Chapter 3 of *Combustion Fundamentals for*  
18 *Waste Incineration* (American Society of Mechanical  
19 Engineers, 1974), the reaction products for these molar  
20 quantities are calculated assuming complete combustion with  
21 the following rules:

22

23 a) All carbon (C) in feed converts to carbon dioxide (CO<sub>2</sub>)

24

25

26 b) All sulfur (S) in feed converts to sulfur dioxide (SO<sub>2</sub>)

27

28

29 c) The halogens (Cl, F) in feed convert to hydrogen halides

30

31

32

33 d) Hydrogen (H) present in feed in excess of that  
34 required to yield products in item c) above will be  
35 converted to water

36

37

38 e) Nitrogen (N) from feed or air is emitted as molecular  
39 nitrogen

40

41

42 Third, with these rules, the balanced chemical reaction for  
43 combustion of a compound can be written.

44

45 For example, the resulting reaction equation for a  
46 hydrocarbon like methane (CH<sub>4</sub>) is

47

C.2-4

1 Note that the term feed in the preceding rules (a through  
2 e) includes both material being combusted and the fuel  
3 source of hydrogen such as methane or methanol.  
4 Additionally, stoichiometric calculations as described  
5 above presume that the compounds undergoing combustion are  
6 essentially free of inorganic constituents.

7  
8 These calculations provide the theoretical amount of oxygen  
9 needed for the overall combustion reaction for the feed  
10 based on the available information used in the  
11 calculations. The initial estimate for the amount of  
12 oxygen to be used in combustion testing will be determined  
13 from this theoretical amount with adjustments for target  
14 oxygen level in thermal reactor system exhaust gas. The  
15 actual amount of oxygen to be used in combustion testing  
16 will be based oxygen monitoring described in Section C.2.4.

17  
18 These stoichiometric calculations will also be used as  
19 needed to initially estimate and adjust experimental  
20 conditions for combustion testing in Section C.2.4.

### 21 22 **C.2.3 Thermogravimetric Analysis**

23  
24 Thermogravimetric analysis (TGA) will be conducted to  
25 determine the temperature range required for gasification  
26 of each test substance composite. TGA will be conducted in  
27 flowing air from room temperature to 1000°C as described in  
28 Appendix B.1.

29  
30 The TGA weight-loss profile for each test substance  
31 composite will be evaluated to determine the temperature at  
32 which the weight loss reaches a final asymptote across the  
33 temperature range investigated. This temperature  
34 corresponds to the point at which no further gasification  
35 (under test conditions) occurs for the material and will be  
36 considered the temperature for complete gasification of the  
37 material.

### 38 39 **C.2.4 Combustion Testing**

#### 40 41 **C.2.4.1 Test Objective**

42  
43 The objective of the testing program described in Appendix  
44 C.2 is to assess the potential for waste incineration of  
45 each test substance composite to emit PFOA, based on  
46 quantitative determination of potential exhaust gas levels  
47 of PFOA from laboratory-scale combustion testing under

C.2-5

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 conditions representative of typical municipal waste  
2 combustor operations in the U.S.

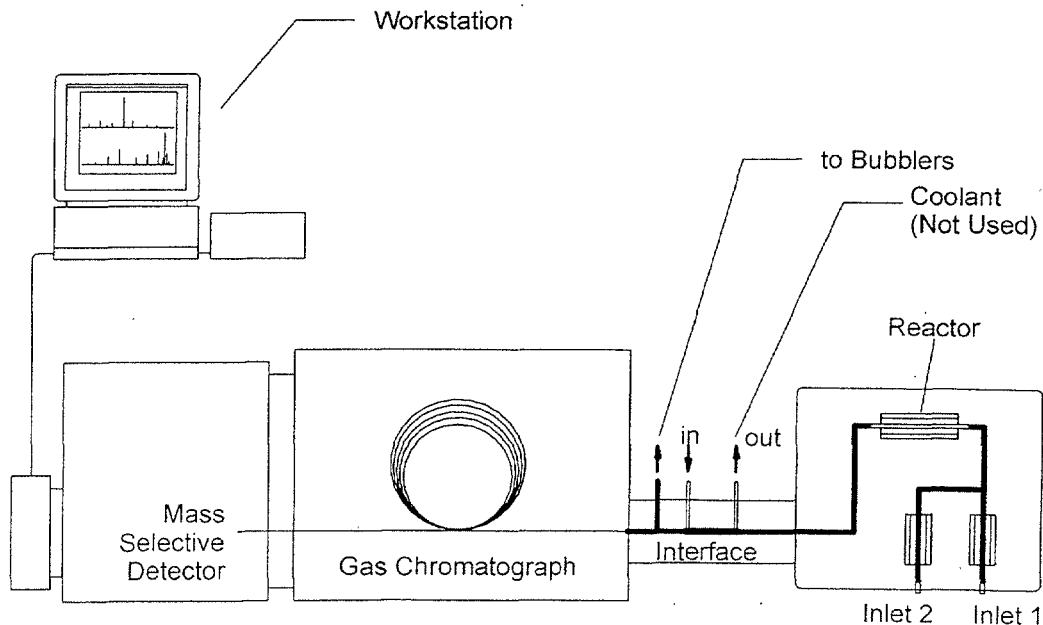

3  
4 C.2.4.2 Experimental Apparatus

5  
6 Combustion testing will make use of the Advanced Thermal  
7 Reactor System (ATRS) at the University of Dayton Research  
8 Institute (UDRI). The ATRS is a laboratory-scale, non-  
9 flame, batch-charged, continuous flow thermal reactor  
10 system. The use of this non-flame thermal reactor system  
11 gives a conservative representation of full-scale waste  
12 incineration prior to air pollution controls.

13  
14 In the ATRS, the test sample is gasified and transported to  
15 a high temperature reactor. In the high temperature  
16 reactor, the sample vapors are subjected to controlled  
17 conditions for residence time and temperature. As  
18 described in Sections C.2.4.5 and C.2.4.6, combustion  
19 products will be monitored or collected for quantitative  
20 analysis.

21  
22 A schematic of the ATRS as configured for this test program  
23 is shown in Figure C.2-1.

24  
25 **Figure C.2-1. Schematic of ATRS for this Test Program**

26  
27 The ATRS consists of a reactor assembly and in-line gas  
28 chromatograph/detector system connected via an interface.

C.2-6

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 The reactor assembly consists of a thermally insulated  
2 enclosure housing the sample introduction, reactor, and  
3 transfer line systems.

4  
5 Sample introduction for solid materials (Inlet 1) employs a  
6 pyroprobe, a device designed to gasify samples by heating  
7 them at a fixed rate. The main gas flow will also be fed  
8 via Inlet 1, and Inlet 2 will be used to feed supplemental  
9 flow.

10  
11 During combustion tests, the transfer line between the  
12 pyroprobe and the reactor is heated and maintained above  
13 200 °C. The reactor is housed within its own small tube  
14 furnace and may be independently heated to as high as 1100  
15 °C. (Actual conditions for this test program are presented  
16 in Section C.2.4.3.) The transfer line from the reactor to  
17 the interface is heat traced to greater than 200 °C to  
18 prevent cool regions where reactor products could otherwise  
19 be lost through condensation.

20  
21 The interface routes the combustion exhaust gas to the in-  
22 line gas chromatograph (GC) and mass selective detector  
23 (MSD) or to sample collection for off-line analysis. For  
24 combustion testing in this test program, the interface will  
25 also be maintained above 200 °C. Exhaust gas monitoring for  
26 this program is described in Section C.2.4.5.

#### 27 28 C.2.4.3 Combustion Test Experimental Conditions

29  
30 Each test substance composite will be subjected to  
31 laboratory-scale incineration using the experimental  
32 apparatus described in Section C.2.4.2.

#### 33 34 C.2.4.3.1 Combustion Air

35  
36 Synthetic air (mixture of 21% oxygen and 79% nitrogen) will  
37 be used in place of compressed air to prevent potential  
38 interference in the experimental system due to background  
39 levels of CO<sub>2</sub> in compressed air.

#### 40 41 C.2.4.3.2 Fuel

42  
43 Methanol will be used, as needed, as a supplemental fuel to  
44 ensure the presence of sufficient hydrogen to convert  
45 fluorine to hydrogen fluoride (HF) and chlorine to hydrogen  
46 chloride (HCl).

47

C.2-7

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 As noted in *Municipal Solid Waste in the United States:*  
2 *2000 Facts and Figures* (EPA, 2002), paper and paper  
3 products (made from wood) make up the largest component of  
4 municipal solid waste (MSW). The sum of paper and paper  
5 products with wood in MSW makes up over 30% of MSW.

6  
7 During the 19<sup>th</sup> century, methanol was produced from wood and  
8 was known as wood alcohol. Therefore, methanol can be used  
9 in this experimental program as a surrogate for the paper  
10 and wood fraction of MSW.

#### 11 12 C.2.4.3.3 Operating Conditions

13  
14 The target operating conditions for the high temperature  
15 reactor during the combustion tests for each test substance  
16 composite identified in Appendix A.3 are presented in Table  
17 C.2-1.

18  
19 **Table C.2-1. Combustion Test Target Operating Conditions**

Temperature	1000 °C
Residence Time	2 sec
O <sub>2</sub> concentration in exhaust gas	10%
H <sub>2</sub> O concentration in exhaust gas	15%
Number of replicate runs	3

20  
21 These conditions are conservatively representative of  
22 typical furnace operating conditions of municipal waste  
23 combustors (MWCs) and of typical secondary chamber  
24 operating temperatures for medical waste incinerators in  
25 the U.S. See Appendix D.4 for supporting information.

26  
27 Temperature and residence time values in Table C.2-2 will  
28 be fixed setpoints for these experiments. The temperature  
29 of the high temperature reactor will be controlled within  
30 +10 °C to assure isothermal operation.

31  
32 The amount of each test substance composite fed to the ATRS  
33 in this testing program will be a measured amount less than  
34 5 mg. The actual amount fed, gasification rate (determined  
35 from TGA), air supply, and fuel supply will be adjusted to  
36 assure that the oxygen level in the exhaust will be greater  
37 than or equal to the concentration in Table C.2-1  
38 throughout each test to be representative of typical MWC  
39 conditions. The fuel supply and air supply will also be  
40 adjusted as needed to approach the target H<sub>2</sub>O concentration  
41 in exhaust gas in Table C.2-1.

42

C.2-8

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 The pyroprobe section final temperature (at end of  
2 temperature ramp-up) will be 750 °C or as needed to assure  
3 this section is 50 to 100 °C above the highest temperature  
4 for complete gasification across the test substance  
5 composites as determined from the TGA results; see Section  
6 C.2.3. This is necessary to assure complete gasification  
7 of the sample of test substance composite and a common set  
8 of experimental conditions across the test materials during  
9 combustion testing.

10

## 11 C.2.4.3.4 Blanks

12

13 A minimum of one thermal blank will be run prior to each  
14 set of three combustion test runs for a given test  
15 substance composite. Each thermal blank run will be at the  
16 corresponding combustion test conditions with all feeds  
17 except for the test substance.

18

## 19 C.2.4.4 Process Monitoring

20

21 ATRS process parameters in Table C.2-2 will be monitored  
22 for each combustion test at key points during the test as  
23 noted in the table. Each combustion test will be a minimum  
24 of 5 minutes in duration. If the duration of a combustion  
25 test is greater than 15 minutes, each parameter in Table  
26 C.2-2 will be recorded at least once every 15 minutes.

27

28 **Table C.2-2. Combustion Test Monitoring**

Parameter	Key Time for Recording
Temperature-Reactor	Before & after gasification
Temperature-Transfer line	Before & after gasification
Temperature-Inlet 1	After gasification
Temperature-Inlet 2	Before & after gasification
Gas flow rate-Inlet 1	Before & after gasification
Gas flow rate-Inlet 2	Before & after gasification
Total Gas Flow rate	Before & after combustion test
Make-up Gas (He) Flow rate	Before & after combustion test
Pressure-Reactor	Before & after gasification

29

30 Temperature-Inlet 1 will be recorded at the end of the  
31 temperature ramp-up for gasification to monitor the  
32 pyroprobe final temperature.

33

34 The flow rate of the exhaust gas routed to the bubblers (see  
35 Section C.2.4.5.2) will be determined based on the flow  
36 measurements listed in Table C.2-2.

C.2-9

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1  
2 The amount of material fed to the system will be verified  
3 by weighing the pyroprobe insert cartridge before and after  
4 each experiment.

5  
6 Exhaust gas monitoring is described in Section C.2.4.5.

7  
8 C.2.4.5 Exhaust Gas Monitoring

9  
10 Combustion exhaust gas will be continuously monitored for  
11 oxygen during each combustion test via in-line MSD or via  
12 an oxygen monitor. CO<sub>2</sub> in exhaust gas will be monitored via  
13 in-line GC, in-line MSD, or a continuous monitor; or  
14 exhaust gas will be collected in Tedlar® bags for off-line  
15 analysis of CO<sub>2</sub>. Carbon monoxide (CO) in exhaust gas will  
16 be monitored via in-line GC or a continuous monitor; or  
17 exhaust gas will be collected in Tedlar® bags for off-line  
18 analysis of CO. Tedlar® bag samples may be collected at  
19 the exit of the bubblers described in Section C.2.4.6.

20  
21 C.2.4.6 Exhaust Gas Sampling

22  
23 Gas samples for off-line analysis will be collected as  
24 described in Appendix D.1.

25  
26 A minimum of 60 mL of bubbler aqueous solution composite is  
27 expected from each combustion test. Of this, a minimum of  
28 45 mL will be directed to PFOA analysis, and the remainder  
29 will be directed to fluoride ion analysis.

30  
31 C.2.4.7 Exhaust Gas Analysis

32  
33 C.2.4.7.1 Fluoride Ion

34  
35 A portion of the composite bubbler aqueous solution sample  
36 from each combustion test collected as described in Section  
37 C.2.4.6 will be analyzed for fluoride ion via ion  
38 chromatography.

39  
40 C.2.4.7.2 PFOA

41  
42 A portion of the composite bubbler aqueous solution sample  
43 from each combustion test collected as described in Section  
44 C.2.4.6 will be analyzed for PFOA via LC/MS/MS as described  
45 in Appendix D.2.

46  
47 As described in Appendix D.2, composite bubbler aqueous

1 solution sample results less than method detection limit  
2 (MDL) will be reported as not detected (ND), results  
3 between MDL and the limit of quantitation (LOQ) will be  
4 reported as not quantifiable (NQ), and numerical values  
5 will not be reported.

6  
7 Due to background levels of PFOA, the analytical laboratory  
8 will only report numerical values for PFOA concentration in  
9 the aqueous solution greater than or equal to the LOQ.  
10 This is required to assure that the reported concentration  
11 value is attributable to the aqueous solution sample rather  
12 than to background.

### 13 14 15 C.2.5 Reporting of Results

#### 16 17 C.2.5.1 Elemental Analysis Results

18  
19 The results of elemental analysis for each test substance  
20 composite (as noted in Section C.2.1) will be reported.  
21 The laboratory reports will be included in an appendix to  
22 the final report for incineration testing (test report).

#### 23 24 C.2.5.2 Combustion Stoichiometry Results

25  
26 Combustion stoichiometry (as noted in Section C.2.2)  
27 calculations for each test substance composite will be  
28 included in an appendix to the test report.

#### 29 30 C.2.5.3 TGA Results

31  
32 The temperature for complete gasification and the TGA  
33 graphical results for each test substance composite (as  
34 noted in Section C.2.3) will be included in an appendix to  
35 the test report.

#### 36 37 C.2.5.4 Combustion Test Results

##### 38 39 C.2.5.4.1 Process Monitoring

40  
41 Process monitoring data (as noted in Section C.2.4.4)  
42 recorded for each combustion test will be reported in  
43 tabular form.

##### 44 45 C.2.5.4.2 Exhaust Gas Monitoring

46  
47 Exhaust gas O<sub>2</sub>, CO and CO<sub>2</sub> monitoring results will be

C.2-i1

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 reported as the integrated or average value for each  
2 combustion test. CO will be reported in terms of parts per  
3 million by volume (ppmv). O<sub>2</sub> and CO<sub>2</sub> will be reported in  
4 terms of percent by volume (%).

#### 5 6 C.2.5.4.3 Exhaust Gas Analytical Results

7  
8 Results of analyses noted in Section C.2.4.7 will be  
9 reported for each replicate of each combustion test.

10  
11 The analytical result for each analyte in Section C.2.4.7  
12 will be reported in terms of concentration (mass per  
13 volume) in the bubbler aqueous solution. For each analyte,  
14 this value will be used with the associated exhaust gas  
15 volume to compute an exhaust gas concentration and with the  
16 associated test substance mass to compute mass of analyte  
17 per mass of test substance composite.

#### 18 19 C.2.5.4.3.1 Fluoride

20  
21 Fluoride ion in the exhaust gas will be reported on the  
22 basis of mass of fluoride ion per mass of test substance  
23 composite. The corresponding hydrogen fluoride value for  
24 each will also be computed and reported for reference.

#### 25 26 C.2.5.4.3.2 PFOA

27  
28 PFOA results for the bubbler aqueous solution samples will  
29 be reported as described in Section C.2.4.7.2. PFOA  
30 results for associated blanks will also be reported.

31  
32 If present in the bubbler aqueous solution at a  
33 concentration above the matrix-specific LOQ, PFOA in the  
34 exhaust gas will be reported on the basis of mass of PFOA  
35 per mass of test substance composite.

#### 36 37 C.2.5.5 Release Assessment

38  
39 In the event that PFOA is reported for the exhaust gas  
40 bubbler aqueous solution at a concentration above the LOQ  
41 for the three runs for a given test substance composite, a  
42 release assessment report for the subject material will be  
43 prepared following the outline in Appendix E.2 and will be  
44 included in the test report.

45

**ATTACHMENTS AND REFERENCED MATERIALS**

- D.1 Exhaust Gas Sampling
- D.2 PFOA Analysis Method
- D.3 Wickbold Torch Method
- D.4 Waste Incineration and Operation Conditions

1 **APPENDIX D.1**  
2 **EXHAUST GAS SAMPLING VIA BUBBLERS**

3  
4 Gas samples for off-line analysis will be collected from a  
5 vent line off the interface of the thermal reactor system  
6 described in Appendix C.2.4. Flexible (silicone or  
7 equivalent) tubing will connect the vent line and a set of  
8 bubblers.

9  
10 Gas absorption via these bubblers will provide aqueous  
11 solution (of documented content) to analyze for prescribed  
12 parameters. Two to four bubblers (low pressure drop  
13 impingers) in series will be used. Each bubbler will  
14 contain a predetermined amount of aqueous solution, and the  
15 total amount of solution at the beginning of each test run  
16 will be a minimum of 55 mL. The temperature of the gas  
17 exiting the last bubbler will be monitored.

18  
19 An additional bubbler (which is empty) will be added to the  
20 front end of this series of bubblers to serve as a knock-out  
21 pot if calculations or preliminary measurements indicate  
22 that greater than 10 mL of water will be produced during the  
23 testing for a given material.

24  
25 Upon completion of sample collection, the amount in each  
26 bubbler will be weighed and recorded, and the contents of  
27 the bubblers will be composited for subsequent analysis.  
28 Additionally, the flexible tubing will be rinsed with 5 mL  
29 of HPLC water to collect potential condensate in the tubing;  
30 this rinsate will be combined with the bubbler composite  
31 prior to analysis.

32  
33 Bubbler aqueous solution composites will be conveyed to  
34 analytical laboratory(ies) in polyethylene, polypropylene,  
35 or glass container(s).

D.1-1

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

04

1 **APPENDIX D.2**  
2 **PFOA ANALYSIS BY LC/MS/MS**

3  
4 D.2.1 Introduction

5  
6 Samples to be analyzed for PFOA in this study will be  
7 subjected to Liquid Chromatography with Tandem Mass  
8 Spectrometry (LC/MS/MS) in accordance with "Method of  
9 Analysis for the Determination of Ammonium  
10 Perfluorooctanoate (APFO) in Water Revision 1" (Exygen  
11 method) revised per the section-by-section comments listed  
12 in Section D.2.4 below. These revisions are necessary to  
13 adapt a method originally developed for liter quantity  
14 water samples to samples related to testing described in  
15 Appendix C.

16  
17 The testing programs described in Appendix C are expected  
18 to generate samples of aqueous solution, methanol (e.g., as  
19 used for extraction or rinsing), and corresponding blanks.  
20 The expected sample size for aqueous solution samples (from  
21 exhaust gas bubbler sample collection) available for  
22 analysis via this method is approximately 50 mL.

23  
24 D.2.2 Method Summary

25  
26 PFOA is extracted from water using a disposable C<sub>18</sub> solid  
27 phase extraction (SPE) cartridge. PFOA is eluted from the  
28 cartridge with methanol. Quantification of PFOA is  
29 accomplished by electrospray liquid chromatography/tandem  
30 mass spectrometry (LC/MS/MS) analysis.

31  
32 D.2.3 Reporting

33  
34 The target limit of quantitation (LOQ) for this study with  
35 this method is 50 ng/L based on prior work with water  
36 samples where an 8-fold concentration via extraction using  
37 C<sub>18</sub> SPE cartridge has been demonstrated. The actual LOQ  
38 will be matrix dependent; for samples (e.g., methanol  
39 rinsate) where the 8-fold concentration cannot be  
40 performed, the target LOQ for this study is 400 ng/L.

41  
42 Sections 4.5.4 and 5 of the Exygen method explain reporting  
43 for field samples such as bubbler aqueous solution  
44 composites, which are distinct from blanks and spikes, as  
45 follows:

46  
47 Field samples in which either no peaks or peaks less than the

D.2-1

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 MDL are detected at the corresponding analyte retention time  
 2 will be reported as ND (not detected). Samples in which  
 3 peaks are detected at the corresponding analyte retention  
 4 time that are less than the LOQ and greater than or equal to  
 5 the MDL will be reported as NQ (not quantifiable).  
 6  
 7 Therefore, sample results less than method detection limit  
 8 (MDL) will be reported as ND, and sample results between  
 9 MDL and the limit of quantitation (LOQ) will be reported as  
 10 NQ. Numerical values will not be reported for such  
 11 samples. Only concentrations above the LOQ, where the  
 12 reported concentration is attributable to the sample rather  
 13 than to background, are reported with numerical values.  
 14  
 15 Additionally, if the PFOA anion is found in a sample at a  
 16 concentration above the LOQ for the matrix but is less than  
 17 5 times the concentration found in the associated blank,  
 18 the result will be flagged and treated as ND.  
 19  
 20 D.2.4 Study-Specific Comments on the Method  
 21

Section	Comment
1	<ul style="list-style-type: none"> <li>• The concentration of PFOA found will be reported directly and the mathematical conversion for reporting as APFO mentioned in the 4<sup>th</sup> sentence of the 2<sup>nd</sup> paragraph will not be performed.</li> <li>• Since the 8-fold concentration described in the 2<sup>nd</sup> sentence 4<sup>th</sup> paragraph (which forms the basis for the LOQ in the 3<sup>rd</sup> paragraph and the MDL in the 4<sup>th</sup> paragraph) is dependent on having a minimum of 40 mL of aqueous sample amenable to extraction using the C<sub>18</sub> SPE cartridge described in section 4.4 of the method, the LOQ and MDL in the method will be a factor of 8 higher than reported where less than 40 mL of sample is available or where the sample is not amenable to extraction using the C<sub>18</sub> SPE cartridge described in section 4.4 of the method (e.g., methanol).</li> </ul>
3.3 Note at top of page 8	<ul style="list-style-type: none"> <li>• The note stating "Equivalent materials may be substituted for those specified in this method if they can be shown to produce satisfactory results" will not be used in the analysis for this testing program.</li> </ul>
3.3 Notes,	<ul style="list-style-type: none"> <li>• The following text will be used in place of Note 1 with respect to the PFOA analysis</li> </ul>

Note 1	<p>conducted for this testing program:</p> <p>In order to avoid contamination, the use of disposable labware (tubes, pipets, etc.) is required.</p>
3.3 Notes, Note 4	<ul style="list-style-type: none"> <li>The following text will be used in place of Note 4 with respect to the PFOA analysis conducted for this testing program:</li> </ul> <p>Solvents (e.g., methanol) used for this analysis must be checked for the presence of contaminants by LC/MS/MS before use.</p>
3.5 opening text prior to 3.5.1	<ul style="list-style-type: none"> <li>Where the available amount of sample is expected to be much less than 1 liter, insufficient sample is available to prepare the fortified matrix spikes described in the opening text of section 3.5. In this case, the analytical standards discussed in this opening text will be limited to two purposes since the third purpose (matrix spike) stated in <u>the method cannot be done.</u></li> </ul>
4.3, item b	<ul style="list-style-type: none"> <li>Where the available amount of sample is expected to be less than 80 mL (= 2 * 40), the replicate extraction noted in the first sentence of this item cannot be performed.</li> <li>If the sample is not an aqueous sample amenable to extraction using the C<sub>18</sub> SPE cartridge described in section 4.4 of the method, then section 4.4 is skipped such that the sample is analyzed directly. (Note: For such samples, the LOQ and MDL will be 8 times higher than the values quoted in the method.)</li> </ul>
4.3, item c	<ul style="list-style-type: none"> <li>As noted in comment on section 3.5 opening text above, fortified matrix spikes will not be prepared when the available amount of sample is much less than 1 liter.</li> <li>Where the available amount of sample is expected to be less than 80 mL (= 2 * 40), the conditional repeat fortification and extraction described in the third sentence of this item cannot be performed.</li> </ul>
4.4	<ul style="list-style-type: none"> <li>Extraction using the C<sub>18</sub> SPE cartridge requires a suitable aqueous sample. This extraction and the corresponding 8-fold concentration pointed out in the NOTE at the end of this section cannot be performed on non-aqueous</li> </ul>

D.2-3

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

	(e.g., methanol) samples.
4.4, item 1	<ul style="list-style-type: none"> <li>In order to measure out the 40 mL mentioned in this item, it is necessary to have at least 45 mL of sample to enable pipet transfer.</li> </ul>
4.5.4, item g	<ul style="list-style-type: none"> <li>A storage stability study for PFOA in water performed independently of the development of the method indicates that PFOA may be stored in glass, polystyrene, polypropylene, or polyethylene containers without measurable degradation for up to 68 days prior to extraction. Therefore, the total holding time between sample collection and analysis for aqueous PFOA samples in this study may exceed the 14 day limit noted in the first sentence of this item provided that the sample is not held for greater than 68 days unless additional storage stability testing justifies a longer hold time.</li> </ul>
4.6, item 3	<ul style="list-style-type: none"> <li>As noted in comment on section 3.5 opening text above, fortified matrix spikes will not be prepared when the available amount of sample is much less than 1 liter. In this case, acceptance criteria for matrix spike recoveries will not be considered.</li> </ul>
5, item c	<ul style="list-style-type: none"> <li>The calculation in equation 3 in this section will not be performed since it is not necessary to convert the PFOA analytical results to APFO for this study.</li> </ul>

1 **APPENDIX D.3**  
2 **WICKBOLD TORCH METHOD FOR TOTAL FLUORINE**

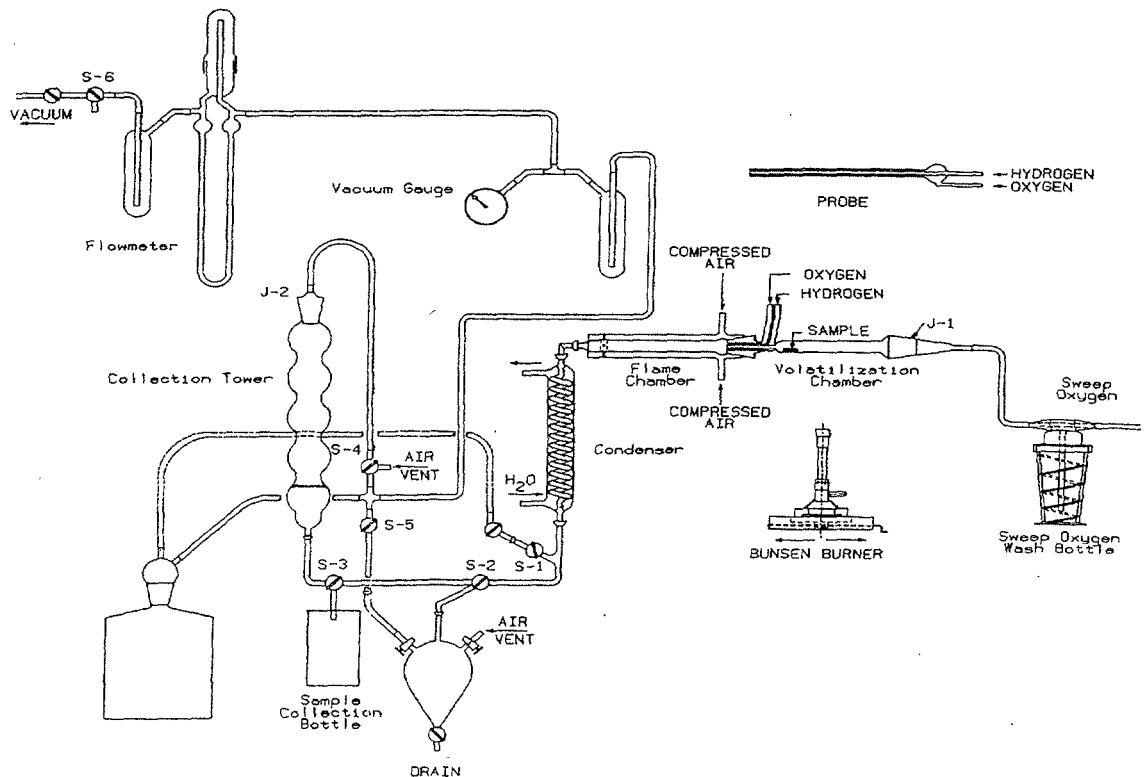

3  
4 D.3.1 Introduction

5  
6 "The carbon-fluorine bond is exceptionally strong, and  
7 extremely vigorous conditions are needed for quantitative"  
8 analysis of fluorine in organic compounds. (Kissa, 1998)  
9 The "most vigorous" technique for measurement of fluorine  
10 in organic compounds is "combustion in an oxyhydrogen  
11 flame" referred to as the Wickbold torch. (Kissa, 1998)

12  
13 D.3.2 Apparatus

14  
15 A typical configuration for the Wickbold oxyhydrogen torch  
16 apparatus as described by Sweetser (1956) is shown in  
17 Figure D.3-1.

18  
19  
20 **Figure D.3-1. Wickbold Oxyhydrogen Torch Apparatus**

D.3-1

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

## 1 D.3.3 Method Description

2

3 The sample size for the standard sample boat is up to 20 mg  
4 for a solid or up to 5 mL for a liquid.

5

6 With the oxyhydrogen torch in operation, the sample is  
7 pyrolyzed or vaporized with a Bunsen burner moving on a  
8 rail below the volatilization chamber. The vapors and  
9 pyrolysis products are swept through the oxygen-hydrogen  
10 flame chamber operating at up to approximately 2000 °C to  
11 mineralize the fluorine in the sample to fluoride ion. The  
12 resulting fluoride ion is absorbed in the collection tower  
13 containing water or an alkaline solution.

14

15 The absorbed fluoride ion is measured via fluoride ion-  
16 selective electrode or ion chromatography.

17

18 The reported limit of quantitation for total fluorine via  
19 the Wickbold Torch method is 0.5 ppm (0.5 mg/kg). The  
20 accuracy of this method for determination of total fluorine  
21 in fluorinated polymers is exemplified by total fluorine  
22 values of 75.35% to 75.84% for PTFE with known total  
23 fluorine content of 76.0%. (Sweetser, 1956)

24

## 25 D.3.4 Safety Considerations

26

27 Use of hydrogen presents a potential fire and explosion  
28 hazard. Use of oxygen presents a potential fire hazard.  
29 Safe operation of the oxyhydrogen torch is assured by the  
30 use of specialized equipment with shielding and elaborate  
31 safety devices by well-trained personnel at a qualified  
32 laboratory.

1 **APPENDIX A.4**

2 **PREPARATION OF FLUOROTELOMER-BASED POLYMER COMPOSITES**

3  
4 4.1 Assembly of Components

5  
6 For each telomer-based polymeric product (TBPP) component  
7 for each test substance composite described in Appendix  
8 A.1, each company will collect a minimum of 100 mL of  
9 first, quality production of a representative grade of  
10 TBPP. Each company will send a minimum of 25 mL of each  
11 such TBPP component to a facility designated by the Telomer  
12 Research Program (TRP) and store the remainder of each such  
13 TBPP component under conditions at or below ambient  
14 temperature for a period of 5 years. Both parts will be  
15 contained in new, unused packaging customarily used for  
16 product sample packaging or in new, unused polyethylene,  
17 polypropylene, or glass container(s).

18  
19 Transmission of TBPP components for test substance  
20 composite preparation in this program will include formal  
21 Chain of Custody procedures. For each TBPP component for  
22 each test substance composite, each company will assign a  
23 unique non-CBI identifying name (e.g., unique generic name)  
24 and identify which composite the component is to go into.  
25 This name and the identity of the composite it is to go  
26 into will be used as the "sample description" on the Chain  
27 of Custody form used when conveying TBPP component(s) to  
28 the compositing laboratory. The Chain of Custody form used  
29 when conveying TBPP component(s) to the compositing  
30 laboratory will also distinguish among the TRP member  
31 companies to verify that each company contributes to each  
32 applicable composite.

33  
34 The TRP-designated facility assembling the components may  
35 be the compositing laboratory or may be a single common  
36 alternate facility. If such an alternate facility is used,  
37 then new Chain of Custody form(s) will be prepared, as  
38 needed to remove CBI while assuring component distinction,  
39 to accompany the TBPP component to the compositing  
40 laboratory.

41  
42 The deadline for each company to submit its TBPP components  
43 to the TRP-designated facility is shown in Table of the  
44 ECA.

45  
46 4.2 Preparation

47

A-1

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 The TBPPs described in Appendix A.1 are aqueous dispersions  
2 with nominally 20% solids, which contain the fluorotelomer  
3 based polymer (FTBP). Each test substance will be an FTBP  
4 solids composite following dewatering and will be prepared  
5 as described in Section 4.2.1 or as described in Section  
6 4.2.2 below.

7  
8 Composite preparation will be conducted under laboratory  
9 conditions designed to prevent cross-contamination and  
10 designed to assure solids temperatures less than 60 °C.

11  
12 The telomer product solids composites will be substantially  
13 free of inorganic constituents.

14  
15 Following preparation of each composite, each composite  
16 will be placed in a polyethylene, polypropylene, or glass  
17 container and will be accompanied by a new Chain of Custody  
18 (for the composite(s)) until each composite reaches the  
19 incineration testing facility.

20  
21 4.2.1 Mixing Followed by Dewatering

22  
23 The composite preparation sequence via mixing followed by  
24 dewatering is follows:

- 25  
26 1. For each composite, the relevant TBPP components  
27 will be gathered.  
28  
29 2. A portion of each of these TBPP liquids will be  
30 analyzed to determine the amount of FTBP solids via  
31 measurement of Total Fluorine as described in  
32 Appendix D.3. The moisture content of a portion of  
33 each TBPP liquid will be determined as described in  
34 Appendix C.2.1.4.  
35  
36 3. The amount of each component TBPP liquid to go into  
37 a given composite will be established based on the  
38 Total Fluorine result from step 2 to assure that the  
39 FTBP solids of each component into a given composite  
40 will be present in equal proportions (on a Total  
41 Fluorine basis).

42 NOTE: — [EXAMPLE CALCULATION TO BE DEVELOPED]

43 4. For each composite, the component TBPP liquids will  
44 be mixed according to the amounts from step 3 to  
45 form the composite as a liquid.

46  
47 5. For each composite as a liquid, the liquid will be

A-2

DRAFT/SUBJECT TO REVISION  
DOES NOT REFLECT INPUT FROM ALL MEMBER COMPANIES

1 spread into sufficiently large aluminum pan(s). The  
2 material in the pan(s) will be dewatered via  
3 evaporation at ambient conditions (thereby assuring  
4 solids temperature less than 60 °C) in a laboratory  
5 hood (away from other potential sources of PFOA) for  
6 two days until the material is visibly free of  
7 excess water (i.e., visibly drip free). (A small  
8 amount of residual moisture is expected to be  
9 remaining in the dewatered material.)

10  
11 6. The dewatered FTBP solids will be treated with  
12 liquid nitrogen as necessary to allow for easy  
13 release from the aluminum pan(s). The material will  
14 be transferred to a mortar and pestle and ground  
15 using liquid nitrogen as necessary to produce  
16 visibly consistent solids size.

17  
18 4.2.2 Dewatering Followed by Mixing

19  
20 The composite preparation sequence via mixing followed by  
21 dewatering is follows:

- 22  
23 1. For each composite, the relevant TBPP components  
24 will be gathered.  
25  
26 2. A portion of each of these TBPP liquids will be  
27 analyzed to determine the amount of FTBP solids via  
28 measurement of Total Fluorine as described in  
29 Appendix D.3. The moisture content of a portion of  
30 each TBPP liquid will be determined as described in  
31 Appendix C.2.1.4.  
32  
33 3. The amount of FTBP solids for each TBPP component to  
34 go into a given composite will be established based  
35 on the Total Fluorine result from step 2 to assure  
36 that the FTBP solids of each component into a given  
37 composite will be present in equal proportions (on a  
38 Total Fluorine basis). The result from step 2 for  
39 Total Fluorine also establishes the minimum amount  
40 of TBPP liquid for each component needed for  
41 subsequent preparation steps.

42 NOTE — [EXAMPLE CALCULATION TO BE DEVELOPED]

- 43 4. For each component in each composite, an amount of  
44 the TBPP liquid greater than or equal to the minimum  
45 amount of each TBPP liquid from step 3 will be  
46 spread into sufficiently large aluminum pan(s). The  
47 material in each pan will be dewatered via

- 1 evaporation at ambient conditions (thereby assuring  
2 solids temperature less than 60 °C) in a laboratory  
3 hood (away from other potential sources of PFOA) for  
4 two days until the material is visibly free of  
5 excess water (i.e., visibly drip free). (A small  
6 amount of residual moisture is expected to be  
7 remaining in the dewatered material.)  
8
- 9 5. The dewatered FTBP solids will be treated with  
10 liquid nitrogen as necessary to allow for easy  
11 release from the aluminum pan(s). The material will  
12 be transferred to a mortar and pestle and ground  
13 using liquid nitrogen as necessary to produce  
14 visibly consistent solids size.  
15
- 16 6. The dewatered FTBP solids from step 5 for each  
17 relevant component in the amount of FTBP solids  
18 based on the Total Fluorine result from step 2 will  
19 be mixed together to form each composite.  
20

#### 21 4.3 Verification

22

23 To verify adherence to Section 4.2, the laboratory  
24 preparing a given composite will generate a report  
25 describing how the composite was prepared. This report  
26 will be included in the final report for Phase II  
27 incineration testing.  
28

29 The Total Fluorine content (as described in Appendix D.3)  
30 and the moisture content (as described in Appendix C.2.1.4)  
31 of each composite will be determined as noted in Appendix  
32 C.2.1. The Total Fluorine content of each composite on a  
33 dry basis will be computed and included in the report  
34 prepared by the compositing lab.  
35

36 The weighted average Total Fluorine content of the  
37 components of each composite will be computed on a dry  
38 basis based on the results from step 2 above and included  
39 in the report prepared by the compositing lab.  
40

41 If CBI is in the report of the compositing lab, both a CBI  
42 version and a sanitized version for the public record (from  
43 which CBI has been removed) will be prepared.

**APPENDIX E**

- E.1 Outline for Interim Progress Reporting
- E.2 Release Assessment Report

DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
INCINERATION ECA APPENDICES

APPENDIX E.1

OUTLINE FOR INTERIM PROGRESS REPORTING

Title : Enforceable Consent Agreement for the Laboratory-Scale Incineration Testing of  
Fluoropolymers - Interim Report

OPPT Docket ID No: OPPT-2003- 0071

Date of Interim Report: [ date ]

This Report covers the period from [ date ] to [ date ]

1) List or description of significant ECA Test Program milestones during this period:

2) Description of difficulties : (If none indicate N/A)

3) Actions taken in response to difficulties: (If none indicate N/A)

DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
INCINERATION ECA APPENDICES

APPENDIX E.2

OUTLINE FOR RELEASE ASSESSMENT REPORT

[NOTE: Drafting Committee discussions are continuing to finalize this section]

As described in Part VII.B, footnote 3, Table 1 footnote ??, and Appendix C.2.5.5 of this ECA, if the Phase II incineration testing identifies measurable levels of PFOA (where measurable PFOA is defined to be at or above the limit of quantitation (LOQ) as defined in Appendix D.2) resulting from the incineration testing for any or all of the test substance composites tested under this ECA, the Companies will prepare a release assessment report to place in perspective PFOA is reported for the exhaust gas bubbler aqueous solution at a concentration above the LOQ for the three runs for a given test substance composite, then the potential for PFOA release from full-scale municipal and/or medical waste incineration, as applicable, (including application of air pollution controls) of the subject material in the United States will be assessed to put the data into perspective. At a minimum, the report will follow the general outline described below and will state assumptions, document the basis for the assumptions made, quantitatively estimate the variability of calculated estimates (based on the variability of the parameters in the evaluation), and qualitatively discuss the uncertainty of calculated estimates.

1.0 Introduction

- Statement of objective for combustion testing of test substance composites.
- Applicability of the laboratory-scale combustion testing to full-scale municipal waste combustors (MWCs) and/or medical waste incinerators (as applicable) in the United States.

2.0 Summary of study results

- A listing of exhaust gas analytical results reported for each applicable test substance composite.
- A listing of test substance composite analytical results reported for each applicable test substance composite.

3.0 Discussion

- Description of the combustion section of the applicable waste incineration process(es) being evaluated (MWC and/or medical waste incinerator) including the rationale for selecting test target temperature(s) and description of typical operational parameters. Cross-reference to or submission of relevant parts of Appendix D.4 of this ECA can satisfy this provision.

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
INCINERATION ECA APPENDICES**

- 1           •       Description of the post-combustion air pollution control equipment  
2                   (e.g., lime scrubbing, carbon adsorption) employed by typical  
3                   operating full-scale waste incineration process(es) as applicable.  
4
- 5       4.0    Extrapolation of laboratory test results to the typical waste incineration process(es), as  
6           applicable, described in Section 3.0 (above) for each test substance composite to be  
7           evaluated.
- 8           •       The relevance of the subject test substance composite to MWCs  
9                   and/or medical waste incinerators.
- 10          •       The estimated concentration of the subject test substance  
11                  composite to the applicable type(s) of waste incinerator. Available  
12                  information on hydrogen fluoride concentration in waste  
13                  incinerator exhaust can provide the basis for an upper bound on  
14                  this estimated concentration.
- 15          •       A description of the extrapolation.
- 16          •       A description of any assumptions used.
- 17          •       Any unique qualitative or quantitative descriptors of the test, the  
18                  testing equipment, and the results deemed necessary for  
19                  informative review of the test and test results. 5.0 Sensitivity  
20                  Analysis
- 21          •       Assessment of the impact of variability (quantitative) and  
22                  uncertainty (qualitative) in each parameter on the evaluation  
23                  results.
- 24
- 25       6.0    Conclusions
- 26
- 27       7.0    References

**APPENDIX F**

**COPY OF EPA ORDER INCORPORATING THIS  
ENFORCEABLE CONSENT AGREEMENT**

**DRAFT DOCUMENT - DO NOT CITE OR QUOTE - January 27-29, 2004  
TELOMER ECA DRAFTING COMMITTEE**

**APPENDIX F**

**UNITED STATES  
ENVIRONMENTAL PROTECTION AGENCY**

**TESTING CONSENT ORDER FOR THE LABORATORY-SCALE INCINERATION  
TESTING OF TELOMERS**

**Docket No. OPPT - 2004 - 0001**

Under the authority of section 4 of the Toxic Substances Control Act (TSCA), 15 U.S.C. 2603, the United States Environmental Protection Agency (EPA) issues this testing consent order (Order) to take effect on the date of publication of the notice in the Federal Register announcing the issuance of this Order. This Order incorporates the enforceable consent agreement (ECA) for the laboratory-scale incineration testing of fluorotelomer based polymer test substance composites listed in Appendix A of the ECA.
