

**Cryolite (075101)**  
**Screening Level Usage Analysis (SLUA)**  
**Date: June 21, 2010**

**What is a Screening Level Usage Analysis (SLUA)?**

- Available estimates of pesticide usage data for a particular active ingredient that is used on **agricultural** crops in the United States.
- Pesticide usage data obtained from various sources. The data are then merged, averaged, and rounded so that the presented information is not proprietary, business confidential, or trade secret.

**What does it contain?**

- Pesticide usage data for a **single** active ingredient only.
- Agricultural use sites (crops) that the pesticide is *reported* to be used on.
- Available pesticide usage information from U.S. states that produce 80% or more of a crop, in most cases, or less than 80%, in rare cases, depending on the scope of the survey and available resources.
- Annual percent of crop treated (**average & maximum**) for each agricultural crop.
- Average annual pounds of the pesticide applied for each agricultural crop (i.e., for the states surveyed, not for the entire United States).

**What assumptions can I make about the reported data?**

- **Average pounds of active ingredient applied** - Values are calculated by merging pesticide usage data sources together; averaging across all observations, then rounding. *Note: If the estimated value is less than 500, then that value is labeled <500. Estimated values between 500 & <1,000,000 are rounded to 1 significant digit. Estimated values of 1,000,000 or greater are rounded to 2 significant digits.)*
- **Average percent of crop treated** - Values are calculated by merging data sources together; averaging by year, averaging across all years, & rounding to the nearest multiple of 5. *Note: If the estimated value is less than 2.5, then the value is labeled <2.5. If the estimated value is less than 1, then the value is labeled <1.*
- **Maximum percent of crop treated** - Value is the single maximum value reported across all data sources, across all years, & rounded up to the nearest multiple of 5. *Note: If the estimated value is less than 2.5, then the value is labeled <2.5.*

**What are the data sources used?**

- **USDA-NASS** (United States Department of Agriculture's National Agricultural Statistics Service) – pesticide usage data from 2001 to 2008.
- **Private pesticide market research** – pesticide usage data from 2001 to 2008.
- **NPUD 2002** (National Pesticide Use Database) pesticide usage data from the CropLife America Foundation are used *only* if data are not available from the other sources.

**What are the limitations to the data?**

- Additional registered uses may exist but are not included because the available surveys do not report usage (e.g., small acreage crops).
- Lack of reported usage data for the pesticide on a crop **does not imply** zero usage.
- Usage data on a particular site may be noted in data sources, but **not quantified**. In these instances, the site would not be reported in the SLUA.
- Non-agricultural use sites (e.g., turf, post-harvest, mosquito control, etc.) are not reported in the SLUA. A separate request must be made to receive these estimates.
- Some sites show some use, even though they are not on the label. This usage could be due to various factors, including, but not limited to Section 18 requests, existing stocks of the chemical, data collection errors, and experimental use permits (EUPs).

**Monday, June 21, 2010**  
**Screening Level Estimates of Agricultural Uses of Cryolite (075101)**  
**Sorted Alphabetically**

	Crop	Lbs. A.I.	Percent Crop Ttd.	
			Avg.	Max.
1	Almonds*+	<500	N/C	N/C
2	Apples +	5,000	<1	<2.5
3	Cantaloupes	30,000	5	5
4	Cranberries (NPUD 2002)	1,000	N/C	5
5	Grapefruit	4,000	<1	<2.5
6	Grapes	1,000,000	15	25
7	Kiwi Fruit*	15,000	N/C	N/C
8	Lemons	20,000	<2.5	<2.5
9	Oranges	60,000	<1	<2.5
10	Peaches	4,000	<1	<2.5
11	Peppers	30,000	5	15
12	Potatoes	20,000	<1	<2.5
13	Pumpkins	1,000	<1	<2.5
14	Squash	2,000	<1	<2.5
15	Strawberries	4,000	<1	<2.5
16	Watermelons	8,000	<1	<2.5

All numbers rounded.

<2.5 Less than 2.5 percent of crop treated

<1 Less than 1 percent of crop treated

N/C Not Calculated

+ Crops not known to be listed on active end use product registrations or as Section 18 emergency exemptions when this report was run

\* CA data only (95% or more of U.S. acres in California)

SLUA data sources include:

USDA-NASS (United States Department of Agriculture's National Agricultural Statistics Service)

Private Pesticide Market Research

NPUD 2002 (National Pesticide Use Database) of the CropLife America Foundation

California DPR (Department of Pesticide Regulation)

These results reflect amalgamated data developed by the Agency and are releasable to the public.
