Treflan* E.C. Herbicide

GROUP 3 HERBICIDE

A selective liquid herbicide for preplant soil incorporated weed control in many field crops, vegetables and ornamentals.

AGRICULTURAL

READ THE LABEL AND BOOKLET BEFORE USING
KEEP OUT OF REACH OF CHILDREN

GUARANTEE: trifluralin 480 g/L

REGISTRATION NO. 23933 PEST CONTROL PRODUCTS ACT

CAUTION: FAILURE TO FOLLOW LABEL INSTRUCTIONS MAY RESULT IN ERRATIC WEED CONTROL OR CROP DAMAGE. READ ALL DIRECTIONS CAREFULLY BEFORE APPLYING.

Treflan E.C. for Use in Soybeans

General Information

Use of Treflan E.C. for Vegetable Crops (Spring Application Only)

Use of Treflan E.C. for Vegetables

Minor Use of Treflan E.C. with Sencor 75 DF (Tank-Mix) in Shelterbelts

Use of Treflan E.C. for Vegetable Crops (Spring Application Only)

Use of Treflan E.C. for Forage Legumes (Seed Production/Forage)

TREFLAN E.C. FOR USE IN EASTERN CANADA AND BRITISH COLUMBIA (PAGES * THROUGH * INCLUSIVE)

General Information

Crops Registered

Weeds Controlled

Recommended Rates Per Hectare of Treflan E.C. - Eastern Canada and British Columbia

Treflan E.C. Application with Fluid Fertilizers

Compatibility Test

Treflan E.C. Impregnated/Coated onto Dry Granular Fertilizer

Treflan E.C. for Use in Soybeans

Treflan E.C. Plus Sencor or Lexone (Tank-Mix)

Treflan E.C. Followed by Lorox L or Afrom L (Split Application)

Treflan E.C. Followed by Basagran Plus Assist (Split Application)

Treflan E.C. for Use in Dry Common Beans (White or Kidney)

Treflan E.C. Plus Eptam (Tank-Mix)

Treflan E.C. Followed by Patoran FL or Afesin 2 EC (Split Application)

Treflan E.C. Followed by Basagran Plus Assist

Minor Use of Treflan E.C. with Pursuit in white beans

Treflan E.C. for Standard Spring and Triazine Tolerant Canola

Standard Canola

Triazine Tolerant Canola

Treflan E.C. Plus a Registered Postemergent Triazine Herbicide for Triazine Tolerant Canola

Treflan E.C. for Use in Tomatoes

Treflan E.C. Plus Sencor in Transplanted Tomatoes (Grown for Processing Only)

Treflan E.C. Use for Asparagus - Established Three years

Treflan E.C. for Use on Fall Cereals Grown in Rotation with Flue-Cured Tobacco to control Loose Silky Bentgrass

Postplant Incorporated (Harrowed in After Seeding)

Crops Registered

Application and Incorporation

Treflan E.C. Use for First Year Apple, Apricot, Cherry, Peach, Plum and Pear Trees

Minor Use for Treflan E.C. Plus Dual Plus Sencor (Tank-Mix) Preplant Incorporated for Use in Transplanted Tomatoes

Resistance Management

Notice to User

Notice to Buyer
PRECAUTIONS
HARMFUL IF SWALLOWED OR ABSORBED THROUGH THE SKIN
KEEP OUT OF REACH OF CHILDREN
Avoid contact with skin, eyes or clothing. Do not store near heat or flame. Avoid contamination of foodstuffs, feeds and fish ponds.

If this pest control product is to be used on a commodity that may be exported to the U.S. and you require information on acceptable residue levels in the U.S., refer to www.cropro.org/.

FIRST AID
Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.
If swallowed: Do not induce vomiting. Call a physician or contact a poison control centre. If available, administer 30 to 40 mL (6 to 8 heaping teaspoonfuls) activated charcoal with a large quantity of water. Do not induce vomiting or give anything by mouth to an unconscious person. Immediately transport to a medical care facility and see a physician.
If in eyes: Irrigate with flowing water immediately and continuously for 15 minutes. Consult medical personnel or contact a poison control centre.
If inhaled: Remove individual to fresh air. Get medical attention or contact a poison control centre if breathing difficulty occurs. If not breathing, give artificial respiration, preferably cardiopulmonary resuscitation assistance, and get medical attention immediately.
If on skin: Immediately wash with plenty of soap and water. Get medical attention or contact a poison control centre if irritation develops.

TOXICOLOGICAL INFORMATION
The decision of whether to induce vomiting or not should be made by an attending physician. If lavage is performed, endotracheal and/or oesophageal control is suggested. Danger from lung aspiration must be weighed against toxicity when considering emptying the stomach. No specific antidote. Employ supportive care. Treatment should be based on judgment of the physician in response to reactions of the patient.

AGRICULTURAL CHEMICAL
Do not ship or store with food, feeds, drugs or clothing.

ENVIRONMENTAL HAZARDS
Direct contamination of any body of water with this product may kill fish. Do not contaminate any body of water by direct application, cleaning of equipment or disposal of wastes.

This product contains a petroleum distillate which is moderately to highly toxic to aquatic organisms. Avoid contamination of aquatic systems during application. Do not contaminate these systems through direct application, disposal of waste or cleaning equipment.

STORAGE
DO NOT FREEZE. Store Treflan E.C. in heated storage. Active ingredient crystallization may occur at temperatures below 5°C. If stored below 5°C, check for crystals in the bottom of each container. If crystals are present, place the container in a warm area (at least 15°C) for several hours. For smaller containers, agitate contents by inverting several times and return it to the upright position. For larger containers, circulate contents. After several hours, if any crystals remain, agitate or circulate container contents again.
Ensure any crystals are dissolved before adding to spray tank.

DISPOSAL
Recyclable Containers:
Do not reuse this container for any purpose. This is a recyclable container, and is to be disposed of at a container collection site. Contact your local distributor/dealer or municipality for the location of the nearest collection site. Before taking the container to the collection site:
1. Triple- or pressure-rinse the empty container. Add the rinsings to the spray mixture in the tank.
2. Make the empty, rinsed container unsuitable for further use.

If there is no container collection site in your area, dispose of the container in accordance with provincial requirements.

**Returnable Containers:**
Do not reuse this container for any purpose. For disposal, this empty container may be returned to the point of purchase (distributor/dealer).

For information on disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for clean-up of spills.

**INSTRUCTIONS**
FAILURE TO FOLLOW LABEL INSTRUCTION MAY RESULT IN ERRATIC WEED CONTROL OR CROP DAMAGE. USUAL OR STANDARD SEEDING PRACTICES MAY NOT SUFFICE. READ ALL DIRECTIONS CAREFULLY BEFORE APPLYING.

**WARNINGS**

**Application**
- Do not apply Treflan E.C. to peat or muck soil, or soils which contain more than 15% organic matter.
- Do not apply to fields spread with manure within the last 12 months. After this period, ensure the manure has been thoroughly disintegrated and mixed into the soil to a depth of 10 to 15 cm.
- If the swath or stubble is removed by burning, cultivate once to remove the charcoal layer from the soil surface prior to Treflan E.C. application.
- Application to soils subject to prolonged periods of flooding may result in accelerated herbicide breakdown. Additionally, application to wet soils or soils in poor working condition could result in reduced weed control. See Land Preparation section of this label for further precautions.
- Do not apply to soils with less than 2% organic matter. Application to eroded knolls or grey-wooded soils with highly variable texture or organic matter may result in reduced crop stand, delayed development or reduced yields in either the treated crop or rotational crop.
- Apply uniformly at the recommended rates. Over-application caused by overlapping, improper calibration or uneven application may reduce crop stands in the treated crop or rotational crop.
- DO NOT APPLY BY AIR.
- To avoid potential injury to future wheat rotational crops, growers should avoid applying trifluralin and/or ethalfluralin on the same land at an oilseed/special crop/barley rate for two consecutive crops.

**Crop Year**
- Applied and incorporated according to directions, Treflan E.C. will not harm the treated or rotational crop. However, seedling disease, deep planting, excessive moisture, high salt concentration, soil compaction or drought may weaken crop seedlings and increase the risk of injury, which may result in delayed crop development or reduced yields.
- To reduce the possibility of injury to the treated crop, use good quality certified seed. Seed shallow into a warm, moist firm seedbed using recommended agronomic practices which will promote rapid and even crop germination and emergence.

•
• Each crop has a specific seeding depth requirement, and seeding deeper than recommended can increase the potential risk of damage to the seedling. Refer to industry or government extension published documents which outline recommended seeding practices/depths for each crop.

• CAUTION: Do not graze the treated immature crops or cut for hay; there are not sufficient data available to support such use.

Rotational Crop

• Applied and incorporated according to label directions, Treflan E.C. will not harm rotational crops. However, seedling disease, cold weather, deep planting, excessive moisture, high salt concentrations, soil compaction or drought may weaken seedlings and increase the risk of injury, which may result in delayed crop development or reduced yields.

• As a precaution, oats, sugar beets and small-seeded grasses such as timothy, canaryseed grass and creeping red fescue should not be grown in rotation following a crop treated with Treflan E.C.

• The persistence of Treflan E.C. is influenced by soil moisture and the majority of breakdown occurs during the growing season. If drought or extended dry periods were present in the previous year, higher levels of Treflan E.C. may be present in the soil. To reduce the possibility of injury to rotational crops, seed shallow into a warm moist seedbed using recommended agronomic practices and seeding depths. As an additional safety precaution seeding rate may be increased slightly (10%).

• Western Canada Only - Do not seed wheat as a rotational crop on land if trifluralin and/or ethalfluralin has been used at an oilseed/special crop/barley rate for two consecutive crops.

• Western Canada Only - Do not direct seed (zero till) a rotational crop into standing stubble on land that has been treated with trifluralin or ethalfluralin for the previous crop. A cultivation prior to seeding of the rotational crop is strongly recommended to help aerate the soil and promote seedbed conditions which will enhance seed germination.

• When seeding a rotational crop, use good quality certified seed. Seed shallow into a warm, moist firm seedbed using recommended agronomic practices which will promote rapid and even crop germination and emergence. **Avoid deep seeding, loose seedbeds and seeding into cold soils.**

• Each crop has a specific seeding depth requirement and seeding deeper than recommended can increase the potential risk of damage to the seedling. Refer to industry or government extension published documents which outline recommended seeding practices/depths for each crop.

Weed Resistance

Populations of green foxtail tolerant to trifluralin have developed in a number of fields in Western Canada with a long history of repeated trifluralin use. Trifluralin or ethalfluralin containing products (i.e., Advance®, 10G, Treflan E.C., Heritage**, Triflurex®, Rival², Fortress³ and Edge*) will not control trifluralin tolerant green foxtail. To delay selection or reduce the spread of trifluralin tolerant green foxtail, avoid the use of these products repeatedly in the same field or use a separate herbicide application for control of trifluralin tolerant green foxtail. As a preventative measure, Dow AgroSciences strongly recommends rotating the use of herbicides that have different modes of action. Consult provincial extension personnel for more information.

DIRECTIONS FOR USE

Treflan E.C. is a preemergent herbicide which is mixed (incorporated) into the soil to provide long-lasting control of many annual grasses and broadleaved weeds. Treflan E.C. controls susceptible weeds by killing seedlings as they germinate. It does not control established weeds.

Land Preparation

Cultivate to destroy existing weeds and ensure that large clods are broken before Treflan E.C. application. When applying to stubble fields, chop and thoroughly mix crop residues into soil to a depth of 10 cm. Disc type implements provide the best results. Swath windrows should be evenly spread before
cultivation to avoid strips of concentrated trash cover. Treflan E.C. should not be sprayed on a soil surface with more than 25% trash cover. To avoid concentrating wild oat seeds below the treated layer, do not plow (moldboard) land prior to Treflan E.C. application. If a swath has been removed by burning, cultivate once to remove the charcoal layer prior to application of Treflan E.C.

**Application**

- Add the recommended amount of Treflan E.C. to clean water in the spray tank during the filling operation and agitate thoroughly. Apply with at least 100 L of water per hectare (broadcast basis) using any properly calibrated low-pressure herbicide sprayer that will apply the spray uniformly. Check the sprayer daily to ensure proper calibration and uniform application over the field. Apply Treflan E.C. to soil surface and incorporate in the same operation if possible. Ensure that large clods are broken.

- Do not delay incorporation more than 24 hours after application. When applied as directed, Treflan E.C. will not harm the treated crop or crops that follow in rotation; however, an over-application caused by overlapping, letting the sprayer run in one spot, improper calibration, non-uniform application, etc., may reduce stands of treated crops or crops that follow in rotation.

**Incorporation**

- To incorporate, work Treflan E.C. into the soil in two different directions. Use a tandem disc, discer or field (vibrashank type) cultivator set to work 8 to 10 cm deep for the first incorporation. A field cultivator (vibrashank type) is defined as an implement with 3 or 4 rows of sweeps spaced at intervals of 20 cm or less and staggered so that no soil is left unturned. The second incorporation should be a discing or cultivation in a cross direction at the same depth any time prior to planting.

- Operate disc implements 7 to 10 km/hr and cultivators at 10 to 13 km/hr. Failure to operate implements at recommended speeds may result in erratic weed control due to poor distribution of Treflan E.C. in the soil. *(Deep tillage cultivator not recommended).*

- Treflan E.C. should not be incorporated with a field cultivator when the soil is crusted, lumpy or too wet for good mixing action.

- Disc type implements are preferred on stubble to ensure a 10 cm depth of operation.

- Incorporation with implements set to cut less than 8 cm deep or more than 10 cm deep may result in erratic weed control, crop damage or rotational crop damage.

- Rod weeder, harrows, deep tillage cultivators, chisel plows or hoe drills will not properly incorporate Treflan E.C.

**TREFLAN E.C. FOR USE IN PRAIRIE PROVINCES**

**GENERAL INFORMATION FOR OILSEED AND SPECIAL CROPS - PRAIRIE PROVINCES**

**Crops Registered**

- canola
- triazine tolerant canola
- mustard
- flax (summer and fall application only)
- dry common beans (white or kidney)
- black beans
- soybeans
- faba beans (horsebeans)
- peas (field and canning)
- lentils (fall only)
- sunflowers
- safflower
- alfalfa establishment (flax and canola cover crops only)
- crambe
- sainfoin
- sweet clover (spring only)
- vegetables (see special instructions)
- strawberries (spring application only)
- asparagus - established 3 years
- transplanted shelterbelts
- Saskatoon berries
- forage legumes
  - seedling alsike clover
  - red clover
  - cicer milkvetch
  - bird's-foot trefoil
Weeds Controlled

**Annual Grasses**
- wild oats
- wild millet (green* and yellow foxtail)
- barnyard grass
- crab grass
- brome grass
- cheat
- stink grass
- goose grass
- annual blue grass
- Persian darnel

*Treflan E.C. will not control trifluralin tolerant green foxtail. See specific recommendations in **WARNINGS** section of the label under the subheading **Weed Resistance**.

**Annual Broadleaves**
- wild buckwheat
- cow cockle
- pigweed
- lamb's-quarters
- chickweed
- purslane
- knotweed
- carpetweed

NOTE: When used as directed, Treflan E.C. will provide commercially acceptable control of the above weeds. Some wild oats and wild buckwheat may escape the herbicide action of Treflan E.C. but will be retarded in growth and will provide little competition to the crop.

**Spring Application**
Treflan E.C. can be applied immediately prior to planting or up to three weeks before planting.

**Summer Application**
Treflan E.C. can be applied to summerfallow between June 1 and September 1 for weed control in canola or flax the following year. Apply the summer rate and incorporate as above. Not recommended for sand and sandy loam soils.

Treflan E.C. must be incorporated at least twice with the implement operated in two different directions. The initial incorporation must be done within 24 hours after application. The second incorporation (and subsequent incorporations) may be done whenever necessary to destroy resistant weed growth during the remainder of the fallow season. Shallow tillage (5 to 8 cm) is necessary in the spring prior to planting (refer to Spring Tillage for Seedbed Preparation).

**Fall Application**
Treflan E.C. can be applied in the fall between September 1 and prior to soil freeze-up for weed control the following year. Apply fall rates and incorporate as above. The initial incorporation must be done within 24 hours after application. It is preferred to do both incorporations in the fall followed by tillage (5 to 8 cm) in the spring prior to planting. However, one incorporation may be done in the fall and the second in the spring at the time of seedbed preparation, provided both operations are done at the recommended depth (refer to Spring Tillage for Seedbed Preparation).

**Spring Tillage for Seedbed Preparation**
Spring tillage following summer or fall application of Treflan E.C. should be done prior to seeding when the soil is warm enough to promote germination. Use a disc or field cultivator (vibrashank) set to cut at 5 to 8 cm deep. For optimum weed control in soils with heavy wild oat populations prework early in the spring with a shallow cultivation to promote weed seed germination, followed by a 5 to 8 cm deep cultivation prior to seeding to destroy existing green growth. Avoid transplanting weed seedlings; seed into a weed-free seedbed using accepted cultural practices. Avoid excessive compaction of the soil layer treated with Treflan E.C. Any operation that results in a more shallow or compacted treated layer may allow weeds to emerge. This compaction may result from tractor wheel tracks, implement wheels, drill press wheels or other field operations done after incorporation. Soils are more susceptible to compaction when they are moist.
SPECIAL INSTRUCTIONS FOR FLAX AND LENTILS

1. Both incorporations of Treflan E.C. must be done in the season of application prior to seeding flax in the spring.

2. The seedbed should be shallowly tilled (5 to 8 cm) and packed just prior to seeding in the spring to ensure a firm seedbed and accurate depth of planting.

3. Seeding should be done with a press drill or hoe drill. Seed into a moist seedbed no more than 4 cm deep.

4. Do not seed flax early in May when soil conditions are cold. Seeding should generally not be prior to May 15.

5. Refer to Warning statement regarding stresses that can lead to crop injury or yield reduction.
**USE OF TREFLAN E.C. FOR OILSEED AND SPECIAL CROPS**

| Spring | canola, T.T. canola, mustard, dry common beans (white and kidney), soybeans, faba beans, black beans, peas, sunflower, safflower, crambe, alfalfa est., sainfoin, sweet clover | brown, dark brown or black 2-6% O.M. | 1.7 L/ha | 2.3 L/ha |
|        |                                                                 | black or deep black 6-15% O.M. | 2.3 L/ha | 2.3-3.0 L/ha (use 3.0 L/ha for heavy wild oat infestations) |

| Summer | canola, T.T. canola, flax, safflower | brown, dark brown, black or deep black | Not recommended | 3.4 L/ha |

| Fall | canola, T.T. canola, mustard, dry common beans (white and kidney), flax, soybeans, faba beans, black beans, peas, lentils, sunflower, safflower, alfalfa est. | brown, dark brown or black 2-6% O.M. | 2.3 L/ha | 3.0 L/ha |
|      |                                                                 | black or deep black 6-15% O.M. | 3.0 L/ha | 3.0-3.4 L/ha (use 3.4 L/ha for heavy wild oat infestations) |

**NOTE:** Do not delay first incorporation more than 24 hours after application.

### APPLICATION OF TREFLAN E.C. WITH FLUID FERTILIZERS

Treflan E.C. may be mixed with liquid nitrogen fertilizer (e.g., 28-0-0) for application either preplant soil incorporated or postplant incorporated. Treflan E.C. may also be mixed with Avadex BW<sup>3</sup> and liquid fertilizer for postplant incorporated application in wheat or barley. All label recommendations of Treflan E.C. regarding rates per hectare, approved crops, incorporation, special instructions, cautions and special precautions must be followed.

Treflan E.C. should be poured directly into the liquid fertilizer, mixed thoroughly and applied as soon as possible. Constant agitation is needed until application is complete. Apply the Treflan E.C./fertilizer mixture with properly calibrated equipment suitable for liquid fertilizer application. Ensure that the material is applied uniformly to the soil surface. Follow normal incorporation procedures for Treflan E.C.

Small quantities of liquid fertilizer and herbicide should be tested for compatibility prior to tank-mixing. Use the compatibility test as follows:

1. Put 500 mL of liquid fertilizer into a 1 L jar.
2. Add 10 mL of Treflan E.C.
3. Close jar and shake well.
4. The herbicide and fertilizer are compatible if the herbicide remains in suspension after five minutes. If the herbicide settles out quickly but goes into suspension easily upon shaking, the mixture may be used provided constant agitation is utilized.
5. A compatibility test is also recommended when there is a change in fertilizer supplies, fertilizer formulations and climatic temperatures.
TREFLAN E.C. IMPREGNATED/COATED ONTO DRY GRANULAR FERTILIZER

Dry bulk fertilizer may be impregnated or coated with Treflan E.C. Application should be made as soon as possible after blending. All Treflan E.C. label recommendations regarding rates per hectare, approved crops, incorporation, special instructions, cautions and special precautions must be followed.

To obtain commercially acceptable weed control with Treflan E.C. impregnated on fertilizer, the following minimum rates of fertilizer must be used:

<table>
<thead>
<tr>
<th>Application</th>
<th>Rate (kg/ha)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spring</td>
<td>330</td>
</tr>
<tr>
<td>Fall</td>
<td>250</td>
</tr>
</tbody>
</table>

Mix and blend dry fertilizer and Treflan E.C. in any commonly used dry fertilizer blender. Ensure that uniform spray coverage is obtained. Sufficient blending/mixing time should be allowed to obtain uniform coverage of dry fertilizer with Treflan E.C.

Spread the fertilizer/Treflan E.C. mixture with a properly calibrated granular fertilizer applicator. Be certain the blended material is applied uniformly to the soil surface. The first incorporation should be completed as soon as possible (within 24 hours) after fertilizer application. It is recommended to delay the second incorporation for a period of at least six days to ensure optimum dissipation of Treflan E.C. within the soil.

CAUTION: Any commonly used dry fertilizer can be used for the impregnation of Treflan E.C. except ammonium nitrate. Use with nitrate fertilizers may cause explosion and fire.

NOTE: Compliance with the Fertilizer Act and Regulations (Agriculture and Agri-Food Canada) is the responsibility of the individual/company selling the Treflan E.C./fertilizer mixture.

USE OF TREFLAN E.C. FOR TRIAZINE TOLERANT CANOLA (T.T. CANOLA)

NOTE: This treatment is for use only on triazine tolerant canola. Non-triazine tolerant canola will be killed by this combination.

TREFLAN E.C. PLUS A REGISTERED POSTEMERGENT TRIAZINE HERBICIDE FOR TRIAZINE TOLERANT CANOLA

NOTE: This treatment for use only on triazine tolerant canola. Non-triazine tolerant canola will be killed by this combination.

Treflan E.C. may be applied in the summer, fall and spring for triazine tolerant canola. The postemergence triazine herbicide Bladex L is registered for use after crop emergence to control several additional broadleaved weeds. Refer to the Bladex L label for specific recommendations and follow the warnings and precautions as stated.

USE OF TREFLAN E.C. FOR SOYBEANS

For Treflan E.C. on soybeans refer to Use of Treflan E.C. for Oilseed and Special Crops. A tank-mix combination of Treflan E.C. plus Sencor may be used for weed control in soybeans.

NOTE: Do not plant soybean varieties Ace, Apache, Baron, DAC Eramosa, Maple Amber, Maple Ridge, Nottawa, OAC Eramosa or Portage on areas treated with Sencor as unacceptable injury may result.

TREFLAN E.C. PLUS SENCOR (TANK-MIX): PREPLANT INCORPORATED

Treflan E.C. may be applied in a tank-mix combination with Sencor as a preplant incorporated broadcast application to soybeans for the control of many annual grasses and broadleaved weeds.
Weeds Controlled by Treflan E.C. Plus Sencor
In addition to those weeds controlled by Treflan E.C. alone, the Treflan E.C./Sencor tank-mix will control the following:

- wild mustard
- stinkweed
- green smartweed
- volunteer canola (non-triazine tolerant)
- shepherd’s-purse
- hemp-nettle
- lady’s-thumb

Application
Select the proper rates of Treflan E.C. and Sencor 500 F/75 DF as shown based on soil type and percent organic matter. Follow all land preparation, mixing, spraying, incorporation directions and precautions on this label.

Mixing Sequence
It is important to follow the correct sequence when mixing Treflan E.C. and Sencor in the spray tank.

The following steps are essential when combining Treflan E.C. with Sencor:

1. Fill the spray tank 1/4 to 1/3 full with clean water.
2. While continuing to fill the spray tank and with the agitation and recirculating system operating, slowly add the full amount of Sencor for that tankload.
3. Fill the spray tank to the desired level with clean water, while maintaining constant agitation of the mixture.
4. After the full amount of Sencor is thoroughly mixed, add the calculated amount of Treflan E.C. to the tank and agitate thoroughly.
5. To avoid any compatibility problems, spray immediately. Continuous agitation is required until the mixture is sprayed out. Do not allow the sprayer to stand without agitation or settling will occur and vigorous mixing with a paddle will be necessary to remix the chemical in the spray tank.

Use the Rinse, Drain and Disposal Procedure section instructions to ensure all contents are removed from containers prior to disposal.

Spray Application
Apply the tank-mix of Treflan E.C. and Sencor to the soil surface and incorporate in the same operation, if possible. Do not delay first incorporation more than 24 hours after application. Apply the tank-mix in at least 100 L of water per hectare (broadcast basis) using any properly calibrated low-pressure herbicide sprayer that will apply the spray uniformly. Application may be made with any properly calibrated commercial tractor-drawn or self-propelled field sprayer equipped with the following:

1. Nozzle tips no finer than 6502, 8002 or TK2 with nozzle screens no finer than 0.3 mm (50 mesh).
2. A 0.3 mm or larger line strainer(s) or screen.
3. A pump of sufficient capacity to provide adequate volume through the by-pass and/or jet agitation system to provide a uniform spray mixture even while the booms are operating.

NOTE: Felt filters, small nozzle tips or smaller screens will become clogged.

Sprayer Clean-up
Spray equipment must be thoroughly cleaned to remove remaining traces of herbicide that might injure other crops to be sprayed. Drain any remaining spray solution of Sencor and Treflan E.C. from the spray tank and discard in non-crop areas away from water supplies. Rinse the spray tank and refill with water, adding a heavy-duty detergent at the rate of 250 mL/100 L of water. Recycle this mixture through the
equipment for 5 minutes and spray out. Repeat this procedure twice. Fill the spray tank with clean water, recycle for 5 minutes and spray out. Clean pump and nozzle screens thoroughly. Wash away any spray mixture from the outside of the spray tank, nozzles or spray rig.

**Incorporation**
Refer to General Information for Oilseed and Special Crops.

**NOTE:** Treflan E.C. and Sencor can be applied in the fall prior to soil freeze-up for weed control the following year. Apply fall rates and incorporate as above. The initial incorporation must be done within 24 hours after application. It is preferred to do both incorporations in the fall followed by tillage (5 to 8 cm) in the spring prior to planting. However, one incorporation may be done in the fall and the second in the spring at the time of seedbed preparation, provided both operations are done at the recommended depth (refer to Spring Tillage and Seedbed Preparation).

**Spring Tillage and Seedbed Preparation**
Spring tillage following fall application of Treflan E.C. and Sencor should be done when the soil is warm enough to promote germination. Use a disc or vibrashank cultivator operated at 5 to 8 cm deep. Avoid transplanting weed seedlings. Seed into a weed-free seedbed using accepted cultural practices.
### Spring Application

*Use the 3.4 L/ha rate of Treflan E.C. for heavy wild oat infestation.

**NOTE:**

1. On variable soils with light sandy areas, some injury may occur on the sandy areas if the rate used is for the heavier soil type in the field.

2. Do not use on soils with less than 2% organic matter.

3. On soils with 10% organic matter and higher, broadleaved weed control may not be adequate.

4. Uneven application or improper soil incorporation of Treflan E.C. and Sencor may result in erratic weed control or crop injury depending on rate used.
5. Stress conditions such as seedling disease, cold weather, deep planting, excessive moisture, high salt concentration or drought may weaken soybean seedlings and increase the possibility of damage from Treflan E.C. and Sencor. Temporary lightening in colour may occur on the margins of cotyledons and a slight delay in crop development may be observed. This is quickly outgrown and usually has no lasting effect.

IMPORTANT: Rotation crops such as onions, celery, peppers, cole crops, lettuce and spinach, sugar beets, table beets and turnips, pumpkin and squash, cucumbers and melons, tobacco and canola (non-triazine tolerant) are sensitive to Sencor and may be injured if planted in soil treated with Sencor during the year of application and following crop year. After harvest, tillage practices that provide thorough mixing of the soil may be helpful in reducing the chance of injury to succeeding crops.

As a precaution, oats, sugar beets and small-seeded annual grasses such as timothy, canaryseed grass and creeping red fescue should not be grown in rotation following a crop treated with Treflan E.C.

USE OF TREFLAN E.C. ON WHEAT AND BARLEY: POSTPLANT INCORPORATED (HARROWED IN AFTER SEEDING)

Crops Registered
hard red spring wheat   durum wheat
soft white spring wheat barley

Weeds Controlled
wild millet (green* and yellow foxtail)
*Treflan E.C. will not control trifluralin tolerant green foxtail. See specific recommendations in WARNINGS section of the label under the subheading Weed Resistance.

Mode of Action
Treflan E.C. is applied and incorporated in the soil in the spring after planting and prior to the emergence of the wheat and barley for the control of wild millet (green and yellow foxtail). Weed control is achieved by establishing a shallow (2 cm), treated layer of Treflan E.C. near the soil surface. Within this layer, Treflan E.C. controls weed seeds by killing them as they germinate. Generally, the majority of wild millet seeds germinate from this depth. However, in some years due to climatic conditions, wild millet may germinate from a deeper depth. Consequently, deep-seeded wild millet seeds germinating below the Treflan E.C. layer may not be controlled. Crop safety is maintained since the wheat and barley seeds are located in the untreated soil beneath the layer of Treflan E.C.

Land Preparation
Plant your wheat and barley as you normally do. Wheat and barley should be seeded to a depth of 5 to 8 cm in a well-tilled seedbed.

Application and Incorporation
Treflan E.C. (Harrowed in After Seeding)
Rate per Hectare

<table>
<thead>
<tr>
<th>Soil Texture</th>
<th>Light to Medium</th>
<th>Heavy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Treflan E.C.</td>
<td>1.2 L/ha</td>
<td>1.7 L/ha</td>
</tr>
</tbody>
</table>

1. Add the recommended amount of Treflan E.C. to clean water in the spray tank during the filling operation and agitate thoroughly. Apply at least 100 L/ha of water (broadcast basis) using any properly calibrated low-pressure herbicide sprayer. Check the sprayer daily to ensure proper calibration and uniform application.

2. Apply Treflan E.C. as soon as possible after seeding and before crop emerges.

3. Apply Treflan E.C. to soil surface which is free of trash or was fallowed the previous year. Treflan E.C. should not be sprayed or incorporated when the soil is crusted, lumpy or too wet for good mixing action.
4. Application and the first incorporation should be done in the same operation if possible. Incorporate to a shallow depth with diamond harrows or tyne harrows in two different directions at speeds of 8 to 11 km/hr. Both incorporations must be done within 24 hours of application of Treflan E.C. Uneven incorporation may result in some wild millet escapes in the bottom of furrows left by the last row of the harrows if the depth of the Treflan treated layer in these troughs is not sufficient to prevent emergence of wild millet. To obtain a more uniform layer of treated soil, operate tyne harrows inclined at least 45 degrees backwards and harrow at a speed which minimizes the amount of soil ridging by the harrows.

CAUTION: Wheat or barley may be injured if seeded through a treated layer or into a deeply-incorporated layer of Treflan E.C. Applied according to directions and under normal growing conditions, Treflan E.C. will not adversely affect wheat or barley. Seedling disease, cold weather, improper seeding depth, excessive moisture, high salt concentration or drought may weaken crop seedlings and increase the possibility of damage from Treflan E.C. Under these conditions, delayed crop development or reduced yields may result. This treatment of Treflan E.C. may not provide adequate control of weeds other than wild millet (green foxtail and yellow foxtail).

TREFLAN E.C. PLUS AVADEX BW (TANK-MIX): POSTPLANT INCORPORATED (HARROWEAFTER SEEDING)

Crops Registered
wheat
barley

Weeds Controlled
wild millet (green* and yellow foxtail)
wild oats
*Treflan E.C. will not control trifluralin tolerant green foxtail. See specific recommendations in WARNINGS section of the label under the subheading Weed Resistance.

Land Preparation
Seed crop before application. Seed wheat/barley to depth of 5 to 8 cm using conventional seeding implement.

Application and Incorporation
Treflan E.C. Plus Avadex BW (Tank-Mix)

<table>
<thead>
<tr>
<th>Rate per Hectare</th>

</tr>
</tbody>
</table>

1. Apply and soil incorporate Treflan E.C. plus Avadex BW in a tank-mixed combination in the spring after planting and prior to emergence of wheat or barley.

2. Soil incorporate the mixture to a shallow depth (above the seed). Shallow incorporation may be accomplished with diamond harrows, tyne harrows or other similar implements operated twice over the treated area.

3. Application should be confined to fields which are trash-free or were fallowed during the previous year.
USE OF TREFLAN E.C. FOR STRAWBERRIES, SASKATOON BERRIES AND ESTABLISHED ASPARAGUS

Strawberries
Apply Treflan E.C. prior to planting transplanted strawberries. Follow recommended soil preparation, application and incorporation procedures for Treflan E.C. Apply only in the spring. Do not exceed the maximum application rate of 2.3 L/ha. Over-application may delay establishment of runner plants.

Saskatoon Berries
Apply Treflan E.C. prior to planting transplanted Saskatoon berries. Follow recommended soil preparation, application and incorporation procedures for Treflan E.C. Apply only in the spring. Do not exceed maximum application rate of 2.3 L/ha.

Asparagus (Established Three Years)
Follow recommended soil preparation, application and incorporation procedures for Treflan E.C. Apply to established asparagus in the early spring after ferns are removed but before spear emergence. Or apply after harvest in the late spring or early summer before ferning begins.

CAUTION: Set implements so asparagus crowns are not injured during soil preparation and incorporation.

USE OF TREFLAN E.C. FOR SHELTERBELTS
Apply Treflan E.C. prior to transplanting seedlings. The higher rate of application will result in better weed control and longer persistence in the soil.

Refer to General Information for Oilseed and Special Crops for details on application and incorporation.

♦ Use the higher rate for season long weed control.

NOTE: Treflan E.C. at 2.3 L/ha may be applied preplant incorporated one week prior to sowing Siberian elm seed for annual grass and broadleaved weed control.
NOTE TO BUYER/USER: READ THE FOLLOWING BEFORE USING THIS PRODUCT FOR SPECIAL USE APPLICATIONS: THE DIRECTIONS FOR USE for this product for the use(s) described below were developed by persons other than Dow AgroSciences Canada Inc. and accepted for registration by Health Canada under the User Requested Minor Use Label Expansion program. Dow AgroSciences Canada Inc. itself makes no representation or warranty with respect to performance (efficacy) and/or crop tolerance (phytotoxicity) claims for this product when used on the crop(s) listed on this label.

Accordingly, the Buyer and User assume all liability arising, and agree to hold Dow AgroSciences Canada Inc. harmless from any claims based on efficacy and/or phytotoxicity in connection with the use(s) described on this label.

TREFLAN E.C. PLUS SENCOR 75 DF (TANK-MIX) IN SHELTERBELTS
Crops Registered
- caragana
- villosa lilac
- Saskatoon berry
- green ash
- chokecherry
- poplar
- sea-buckthorn
Weeds Controlled
- wild oats
- witchgrass
- lamb's-quarters
- purslane
- shepherds purse
- green foxtail
- Russian thistle
- wild buckwheat
- stinkweed
- prostrate pigweed

DIRECTIONS FOR USE
Make one application, pre-plant incorporated. Apply as a ground treatment. Apply at a rate of 5.2 L/ha Treflan E.C. plus 400 g/ha Sencor 75 DF in 100-225 L water/ha.

IMPORTANT: Refer to the Treflan E.C. label for correct sequence when mixing Treflan E.C. and Sencor in the spray tank.
Refer to the Sencor label for directions for use and special precautions.

USE OF TREFLAN E.C. FOR VEGETABLES
Apply Treflan E.C. prior to planting. Follow all recommended soil preparation, application and incorporation procedures for Treflan E.C. Apply only in spring.

USE OF TREFLAN E.C. FOR VEGETABLE CROPS (SPRING APPLICATION ONLY)

TREFLAN E.C. FOR USE IN EASTERN CANADA AND BRITISH COLUMBIA

GENERAL INFORMATION

Crops Registered
- soybeans
- dry common beans (white or kidney)
- faba beans
- snap beans, common
- Lima beans
- black beans
- canola
- triazine tolerant canola (Pedigreed seed only)
- forage rape
- forage kale
- transplants of tomatoes, peppers, Brussels sprouts, broccoli, cabbage, cauliflower and strawberries (spring application only)
- crambe
- carrots
- direct-seeded cabbage and cauliflower
- ornamentals (woody nursery stock), perennials
- sunflowers
- stubble turnips (white) - for feed only
- peas (field and canning)
- mustard
- alfalfa establishment (direct seeded)
- winter wheat, fall rye and fall triticale (loose silky bentgrass control only)
- transplanted shelterbelts
- rutabaga
- asparagus - established 3 years
- first year apple, apricot, cherry, peach, plum and pear trees

Weeds Controlled

Annual Grasses
- green and yellow foxtail
- barnyard grass
- crab grass
- brome grass
- cheat
- stink grass
- goose grass
- annual bluegrass
- wild oats
- fall panicum
- loose silky bentgrass
- Triazine tolerant varieties as well.

Annual Broadleaved Weeds
- pigweed
- lamb’s-quarters
- chickweed
- purslane
- knotweed
- carpetweed

*Triazine tolerant varieties as well.

NOTE: When used as directed, Treflan E.C. will provide commercially acceptable control of the above weeds.
### Recommended Rates Per Hectare of Treflan E.C. - Eastern Canada and British Columbia

<table>
<thead>
<tr>

</tr>
<tr>
<td>All crops registered (except for asparagus, winter cereals, peas and Lima beans)</td>
<td>1.2 L</td>
<td>1.7 L</td>
<td>2.4 L</td>
</tr>
</tbody>
</table>

The rates outlined in the previous table are general recommended rates of Treflan E.C. There are specific remarks which refer to individual crops that are noted as follows:

- In Lima beans and peas do not exceed 1.2 L/ha in medium textured soils and 1.7 L/ha in heavy textured soils.
- Treflan E.C. should not be applied to turnips and mustard on sandy and sandy loam soils.
- Direct-seeded cole crops have exhibited marginal tolerance to recommended rates of Treflan E.C. Stunting or reduced stand may occur.
- For strawberries, Treflan E.C. should be applied prior to planting transplants.
- With ornamentals and established woody nursery stock, spray the soil and incorporate as closely as possible to plants without causing damage to roots.
- Treflan E.C. should not be applied on ornamental ground covers such as Ajuga, Myrtle and Pachysandra, as injury may result.
- Unless otherwise directed, use the general rates of Treflan E.C. Apply and incorporate immediately prior to or up to 3 weeks before planting.

### TREFLAN E.C. APPLICATION WITH FLUID FERTILIZERS
Treflan E.C. may be mixed with liquid nitrogen fertilizer (e.g., 28-0-0) for application preplant soil incorporated. All Treflan E.C. label recommendations regarding rates per hectare, approved crops, incorporation, special instructions, cautions and special precautions must be followed.

Treflan E.C. should be poured directly into the liquid fertilizer, mixed thoroughly and applied as soon as possible. Constant agitation is needed until application is complete. Apply the Treflan E.C./fertilizer mixture with a properly calibrated sprayer. Ensure that the material is applied uniformly to the soil surface. Follow normal Treflan E.C. incorporation procedures.

### Compatibility Test
Small quantities of liquid fertilizer and herbicide should be tested for compatibility prior to tank-mixing.

1. Put 500 mL of liquid fertilizer into a 1 L jar.
2. Add 10 mL of Treflan E.C.
3. Close jar and shake well.
4. The herbicide and fertilizer are compatible if the herbicide remains in suspension after five minutes. If the herbicide settles out quickly but goes into suspension easily upon shaking, the mixture may be used provided constant agitation is utilized.
5. A compatibility test is also recommended when there is a change in fertilizer supplies, fertilizer formulations and climatic temperatures.
TREFLAN E.C. IMPREGNATED/COATED ONTO DRY GRANULAR FERTILIZER
Dry bulk fertilizer may be impregnated or coated with Treffan E.C. Application should be made as soon as possible after blending. All Treffan E.C. label recommendations regarding rates per hectare, approved crops, incorporation, special instructions, cautions and special precautions must be followed.

A minimum of 300 kg/ha of dry bulk fertilizer impregnated/coated with Treffan E.C. at the recommended rate must be applied. Mix and blend dry fertilizer and Treffan E.C. in any commonly used dry fertilizer blender, providing uniform spray coverage is obtained. Sufficient blending/mixing time should be allowed to ensure uniform coverage of dry fertilizer with Treffan E.C.

Spread the fertilizer/Treffan E.C. mixture with a properly calibrated granular fertilizer applicator. Be certain the blended material is applied uniformly to the soil surface. The first incorporation should be completed as soon as possible (within 24 hours) after fertilizer application. It is recommended to delay the second incorporation for a period of at least three days to ensure optimum Treffan E.C. dissipation within the soil.

CAUTION: Ammonium nitrate must not be impregnated with Treffan E.C. All other commonly used dry fertilizers may be used for Treffan E.C. impregnation.

NOTE: Compliance with the Fertilizer Act and Regulations (Agriculture and Agri-Food Canada) is the responsibility of the individual/company selling the Treffan E.C./fertilizer mixture.

TREFLAN E.C. FOR USE IN SOYBEANS
Treffan E.C. incorporated before planting soybeans will control most annual grasses and many broadleaved weeds. To control more weeds, use Treffan E.C. in combination with the following:

TREFLAN E.C. PLUS SENCOR OR LEXONE7 (TANK-MIX)

<table>
<thead>
<tr>
<th>Rate per Hectare</th>
<th>Soil Texture</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Light</td>

<tr>
<td>Sencor 75 DF</td>
<td>550 g</td>
</tr>
<tr>
<td>Lexone DF</td>
<td>-</td>
</tr>
<tr>
<td>Lexone L</td>
<td>-</td>
</tr>
</tbody>
</table>

- Tank-mix combinations control all the weeds listed on the Treffan E.C. label plus many additional broadleaved weeds including smartweed, velvetleaf, wild mustard and common ragweed.
- Control of cocklebur may be erratic ranging from fair to excellent depending on soil temperature, time of weed germination, depth of weed seed in the soil and the amount and timing of soil moisture. Cultivation may improve control.
- Tank-mixes of Treffan E.C. and Sencor/Lexone may be applied up to 10 days before planting.
- Do not use on light soils with less than 2% organic matter.
- Applied according to directions and under normal growing conditions, tank-mixed Treffan and Sencor/Lexone will not reduce soybean yields.
- However, Sencor/Lexone alone has limited crop tolerance and initial crop injury may occur under certain conditions.
- Over-application may result in stunting, crop injury or soil residue.
• Uneven application or improper soil incorporation of the tank-mix can result in erratic weed control or crop injury depending on rate used.

• Seedling disease, cold weather, deep planting, excessive moisture, high soil pH (above 7.5), high salt concentration or drought may weaken soybean seedlings and increase the possibility of damage from Treflan E.C. and Sencor/Lexone. Under these conditions, delayed crop development or reduced yields may result.

• On variable soils with light sandy areas, some injury may occur on sandy areas if the rate used is for the heavier soil type in the field. Sandy loam and silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions.

• Do not plant metribuzin-sensitive soybean varieties Ace, Apache, Baron, Maple Amber, Maple Ridge, OAC Ermosa, IA 1003, S-240 or Nottawa on areas treated with Sencor/Lexone as unacceptable injury may result.

• Refer to the Sencor and Lexone labels for directions on use and special precautions. Do not use foliage from soybeans treated with the combination for forage.

IT IS IMPORTANT TO FOLLOW THE CORRECT SEQUENCE WHEN MIXING TREFLAN E.C. AND SENCOR/LEXONE IN THE SPRAY TANK. THE FOLLOWING STEPS ARE ESSENTIAL:

1. Fill the spray tank 1/4 to 1/3 full with clean water.

2. While continuing to fill the spray tank and with the agitation and recirculating system operating, slowly add the full amount of Sencor/Lexone for that tankload.

3. Fill the spray tank to the desired level with clean water, while maintaining constant agitation of the mixture.

4. After the full amount of Sencor/Lexone is thoroughly mixed, add the calculated amount of Treflan E.C. to the tank and agitate thoroughly.

5. Continuous agitation is required until the mixture is sprayed out. Do not allow the sprayer to stand without agitation or settling will occur and vigorous mixing with a paddle will be necessary to remix the chemical in the spray tank.

Variations in this mixing sequence may lead to incompatibilities.

TREFLAN E.C. FOLLOWED BY LOROX L° OR AFOLAN F° (SPLIT APPLICATION)

<table>
<thead>
<tr>
<th>Application / Product</th>
<th>Soil Texture</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>

</tr>
<tr>
<td>Preplant Incorporated / Treflan E.C.</td>
<td>1.2 L</td>
</tr>
<tr>
<td>Preemergence / Afolan F</td>
<td>-</td>
</tr>
<tr>
<td>Preemergence / Lorox L</td>
<td>-</td>
</tr>
</tbody>
</table>

• Do not use Afolan F on sand low in organic matter (less than 3%). Make a single application of Afolan F.

• Use Afolan F as a band or broadcast spray after planting soybeans (at least 5 cm deep) but before soybeans emerge. Refer to the Afolan F label for specific recommendations and precautions.

• Use the 1.75 L rate of Lorox L on light coloured soils with moderate organic matter (2 to 5%). Do not use Lorox L on coarse textured soils low in organic matter, as crop injury may result. Refer to the Lorox L label for specific recommendations.
TREFLAN E.C. FOLLOWED BY BASAGRAN\textsuperscript{10} PLUS ASSIST\textsuperscript{11} (SPLIT APPLICATION)

Rate per Hectare

<table>
<thead>
<tr>

<td>Heavy</td>
</tr>
<tr>
<td>Postemergence / Basagran plus Assist (1/2-1% of the spray volume)</td>
<td>1.75-2.25 L</td>
</tr>
</tbody>
</table>

- Use Basagran as a postemergence treatment at the 1.75 to 2.25 L/ha rate (depending upon weeds present) plus Assist at 1/2 to 1% of the spray volume. Refer to the Basagran label for stage of crop for optimum weed control and specific recommendations.

TREFLAN E.C. FOR USE IN DRY COMMON BEANS (WHITE OR KIDNEY)

Treflan E.C. incorporated before planting dry common beans (white and kidney) will control most annual grasses and many broadleaved weeds. To control more weeds, use Treflan E.C. in combination with one of the following:

TREFLAN E.C. PLUS EPTAM\textsuperscript{12} (TANK-MIX)

Rate per Hectare

<table>
<thead>
<tr>
<th>Application / Product</th>

<tr>
<td></td>
<td>Medium</td>
</tr>
<tr>
<td></td>
<td>Heavy</td>
</tr>
<tr>
<td>Eptam</td>
<td>2.5-3.75 L</td>
</tr>
</tbody>
</table>

- Do not use Eptam plus Treflan E.C. tank mixture on Adzuki beans, cow peas (blackeye peas, blackeye beans), soybeans, Lima beans or other flat podded beans except Romano. Under abnormal weather conditions stunting may occur on Gratiot, Michilite, Sanilac, Seafarer and Seaway varieties. Do not use on muck or charcoal soils. Read and observe all directions and cautions on the label for Eptam.

TREFLAN E.C. FOLLOWED BY PATORAN FL\textsuperscript{13} OR AFESIN 2 EC\textsuperscript{14} (SPLIT APPLICATION)

Rate per Hectare

<table>
<thead>
<tr>
<th>Application / Product</th>
<th>Soil Texture</th>

<td>3.75-5.5 L</td>
</tr>
</tbody>
</table>

Use these rates of Afesin or Patoran FL (400 g/L and 670 g/L) only if preceded by a preplant incorporated herbicide. A higher rate of each is required if used alone in dry common beans (white and kidney). Refer to individual labels for specific recommendations.

TREFLAN E.C. FOLLOWED BY BASAGRAN PLUS ASSIST

Refer to soybean section for Treflan E.C. followed by a postemergent treatment of Basagran plus Assist.

NOTE TO BUYER/USER: READ THE FOLLOWING BEFORE USING THIS PRODUCT FOR SPECIAL USE APPLICATIONS: The DIRECTIONS FOR USE for this product for the use(s) described below were developed by persons other than Dow AgroSciences Canada Inc. and accepted for registration by Health Canada under the User Requested Minor Use Label Expansion program. Dow AgroSciences Canada Inc. itself makes no representation or warranty with respect to performance (efficacy) and/or crop tolerance (phytotoxicity) claims for this product when used on the crop(s) listed on this label.
Accordingly, the Buyer and User assume all liability arising, and agree to hold Dow AgroSciences Canada Inc. harmless from any claims based on efficacy and/or phytotoxicity in connection with the use(s) described on this label.

DIRECTIONS FOR USE

TREFLAN E.C. PLUS PURSUIT\textsuperscript{15} (TANK-MIX) PREPLANT INCORPORATED FOR USE IN WHITE BEANS

A Treflan E.C./Pursuit tank-mix provides broadleaf weed and grass control in white beans. Refer to the product labels for a complete list of weeds controlled. Only one application may be made per season. Apply by pre-plant incorporation, ground application.

**Application rates:**
- Treflan E.C.: 1.25 - 2.4 L/ha
- Pursuit: 313 mL/ha

Refer to the main Treflan E.C. and Pursuit labels for specific instructions, recommendations and precautions.

READ THE ROTATIONAL CROPPING RESTRICTIONS ON THE FULL LABEL BEFORE USING.

TREFLAN E.C. FOR STANDARD SPRING AND TRIAZINE TOLERANT CANOLA

- **Standard Canola**
  Treflan E.C. incorporated alone before planting canola will control most annual grasses and many broadleaved weeds. Refer to General Information for rates and recommendations.

- **Triazine Tolerant Canola**
  Treflan E.C. incorporated before planting canola will control most annual grasses and many broadleaved weeds. To control more weeds, use Treflan E.C. in combination with the following:

TREFLAN E.C. PLUS A REGISTERED POSTEMERGENCE TRIAZINE HERBICIDE FOR TRIAZINE TOLERANT CANOLA

**NOTE:** THIS TREATMENT FOR USE ONLY ON TRIAZINE TOLERANT CANOLA. NON-TRIAZINE TOLERANT CANOLA WILL BE KILLED BY THIS COMBINATION.

Treflan E.C. may be applied in the spring for triazine tolerant canola. A postemergence triazine herbicide registered for this use may then be applied after crop emergence to control several additional weeds. Refer to individual labels of the postemergence herbicides for specific recommendations and follow warnings and precautions as stated.

TREFLAN E.C. FOR USE IN TOMATOES

Treflan E.C., incorporated before planting tomatoes, will control most annual grasses and many broadleaved weeds. To control more weeds, use Treflan E.C. in combination with Sencor for the following:
TREFLAN E.C. PLUS SENCOR IN TRANSPLANTED TOMATOES (GROWN FOR PROCESSING ONLY)

Rate per Hectare

<table>

<td>0.5-0.6 L</td>
</tr>
<tr>
<td>Followed by Postemergence Sencor 500F</td>
<td>0.85 L</td>
</tr>
</tbody>
</table>

*Tank-mix with Treflan E.C.

- A postemergence directed application of Sencor 500F is used to control any weed escapes before they exceed 2.5 cm in height and 3 weeks or more after transplanting tomatoes. This should also leave a residual amount of Sencor 500F to maintain season-long control.

- This follow-up Sencor application is usually timed for early July, but should not be applied earlier than 21 days after transplanting tomatoes or no later than 60 days before harvesting.

- Refer to the Sencor 500F label for additional instructions and precautions.

- Treflan E.C. may damage transplants weakened by any cause which may result in reduced crop yield. To prevent damage, plant only healthy transplants; do not plant when cool, wet or unfavourable growing conditions exist. Follow all application and incorporation directions exactly.

TREFLAN E.C. USE FOR ASPARAGUS - ESTABLISHED THREE YEARS

Follow recommended soil preparation, application and incorporation procedures for Treflan E.C. Apply to established asparagus in the early spring after ferns are removed but before spear extension from the crowns. Or apply after harvest in the late spring or early summer before ferning begins.

CAUTION: Set implements so asparagus crowns are not injured during soil preparation and incorporation.

TREFLAN E.C. FOR USE ON FALL CEREALS GROWN IN ROTATION WITH FLUE-CURED TOBACCO TO CONTROL LOOSE SILKY BENTGRASS

POSTPLANT INCORPORATED (HARRIED IN AFTER SEEDING)

Crops Registered

winter wheat
fall rye
fall triticale

Treflan E.C. is applied and incorporated in the soil in the fall as soon as possible after planting and prior to the emergence of the fall cereal for the control of loose silky bentgrass. Weed control is achieved by establishing a shallow (2 cm) layer of Treflan E.C. near the soil surface. Within this layer, Treflan E.C. controls loose silky bentgrass by stopping growth as the seeds germinate. Crop safety is maintained since the fall cereal seeds are located in the untreated soil beneath the Treflan E.C. layer.
Application and Incorporation
Fall cereals should be seeded to a depth of 5 to 8 cm in a well-tilled seedbed. Apply Treflan E.C. at a rate of 0.8 to 1.2 L/ha product in a minimum of 100 L/ha water with a properly calibrated herbicide sprayer. Use the 1.2 L/ha rate for heavy infestations of loose silky bentgrass. Apply Treflan E.C. as soon as possible after seeding and before crop emerges, to soil surface which is free of trash. Incorporate to a shallow depth with diamond harrows or tyne harrows in two different directions at speeds of at least 8 km/hr. Both incorporations must be done within 24 hours of application.

TREFLAN E.C. USE FOR FIRST YEAR APPLE, APRICOT, CHERRY, PEACH, PLUM AND PEAR TREES
Treflan E.C. applied and incorporated before transplanting fruit trees will control most annual grasses and many broadleaved weeds. For the control of additional weeds, Treflan E.C. may be tank-mixed with Sencor. Do not apply more than one application per year.

### NOTE TO BUYER/USER:

READ THE FOLLOWING BEFORE USING THIS PRODUCT FOR SPECIAL USE APPLICATIONS: THE DIRECTIONS FOR USE for this product for the use(s) described below were developed by persons other than Dow AgroSciences Canada Inc. and accepted for registration by Health Canada under the User Requested Minor Use Label Expansion program. Dow AgroSciences Canada Inc. itself makes no representation or warranty with respect to performance (efficacy) and/or crop tolerance (phytotoxicity) claims for this product when used on the crop(s) listed on this label. Accordingly, the Buyer and User assume all liability arising, and agree to hold Dow AgroSciences Canada Inc. harmless from any claims based on efficacy and/or phytotoxicity in connection with the use(s) described on this label.

### TREFLAN E.C. PLUS DUAL PLUS SENCOR (TANK-MIX) PREPLANT INCORPORATED FOR USE IN TRANSPLANTED TOMATOES

#### DIRECTIONS FOR USE

A Treflan E.C./ Dual/ Sencor tank-mix provides control of broadleaved weeds (including triazine tolerant biotypes), annual grasses and Eastern black nightshade. Only one application may be made per year. **DO NOT USE ON DIRECT-SEEDED TOMATOES.**

Under cold, wet conditions or conditions that may adversely affect good transplant establishment: apply the spray solution and shallow incorporate (5-7.5 cm deep), then plant transplants 5-10 cm deep. Do not harvest crop within 60 days after application.

Follow the rates listed in Table 1.

#### Table 1: Recommended Rates Of Treflan E.C./ Dual/ Sencor Tank-Mix for Use in Transplanted Tomatoes

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

*use the higher rate of Dual for Eastern black nightshade control.

• Refer to the Dual and Sencor labels for specific recommendations and precautions.

#### Mixing Sequence

It is important to follow the correct sequence when mixing Treflan E.C., Sencor and Dual in the spray tank.

The following steps are essential when combining Treflan E.C. with Sencor and Dual:

1. Fill the spray tank 1/4 to 1/3 full with clean water.
2. While continuing to fill the spray tank and with the agitation and recirculating system operating, slowly add the full amount of Sencor for that tankload.
3. Fill the spray tank to the desired level with clean water, while maintaining constant agitation of the mixture.
4. After the full amount of Sencor is thoroughly mixed, add the calculated amount of Treflan E.C. to the tank and agitate thoroughly.
5. Add the calculated amount of Dual to the tank and agitate thoroughly.
6. To avoid any compatibility problems, spray immediately. Continuous agitation is required until the mixture is sprayed out. Do not allow the sprayer to stand without agitation or settling will occur and vigorous mixing with a paddle will be necessary to remix the chemical in the spray tank.
RESISTANCE MANAGEMENT RECOMMENDATIONS

For resistance management, Treflan E.C. is a Group 3 herbicide. Any weed population may contain or develop plants naturally resistant to Treflan E.C. and other Group 3 herbicides. The resistant biotypes may dominate the weed population if these herbicides are used repeatedly in the same field. Other resistance mechanisms that are not linked to site of action, but specific for individual chemicals, such as enhanced metabolism, may also exist. Appropriate resistance-management strategies should be followed.

To delay herbicide resistance:

• Where possible, rotate the use of Treflan E.C. or other Group 3 herbicides with different herbicide groups that control the same weeds in a field.
• Use tank mixtures with herbicides from a different group when such use is permitted.
• Herbicide use should be based on an IPM program that includes scouting, historical information related to herbicide use and crop rotation, and considers tillage (or other mechanical), cultural, biological and other chemical control practices.
• Monitor treated weed populations for resistance development.
• Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment and planting clean seed.
• Contact your local extension specialist or certified crop advisors for any additional pesticide resistance-management and/or integrated weed-management recommendations for specific crops and weed biotypes.
• For further information or to report suspected resistance, contact Dow AgroSciences Canada Inc. at 1-800-667-3852 or at www.dowagro.ca.

NOTICE TO USER: This control product is to be used only in accordance with the directions on this label. It is an offence under the Pest Control Products Act to use a control product under unsafe conditions.

NOTICE TO BUYER: Seller’s guarantee shall be limited to the terms set out on the label and subject thereto, the buyer assumes the risk to persons or property arising from the use or handling of this product and accepts the product on that condition.
